Thread: [Where can I spread my python downloader/backdoored python script?](#)

A13x - August 16, 2022, 10:48 am

What do people download on GitHub other than Discord Mass DM scripts?

I'm looking to mass spread an obfuscated python script that downloads and executes my payload.

Thank you in advance for any input, it's greatly appreciated.

best option is the modern style like nowday kids

Crypt + landing page + domain , and go to facebook ads spend some on advertise and u will get them !

it's good idea you have done but i think most people check the scripts before they use , anyway i would say people most of people who you should target who looking for cheats and botnets and crypters etc... most of them don't really check the scripts they use

maybe also accounts checkers this is TOP on github as i think

LOL

ONE LINE ! Just one line of what i said means everything u need to get bots , if u dont like it or not

cool with u , i will show u next couple of days how its so efective and great way to get bots ,
u just need to hold your ass down on chair and clap your hands to get million bot , this is not how its
work ! work hard to get Quality Bots you looking for
and btw , facebook ads is for target people not bullshit as u think bruh ~!

Selfbots, website botting tools (spigot, etc.), I'd recommend making a Python rat and then
backdooring it and stealing their clients LOL!

the issue you using github as your spreading is its not as reliable as landing page, second you it
self giving away your private crypt for low end slaves, even you get slaves using git hub method
where you bind or spoof you pay load as mail checker cracked rat or cryptor most of teh time this
script used by low level skids and they mostly have 4 gb ram 100 gb system which is waste of your
time energy also not to mention the effort you put to publicize your github in other forums so if you
do same effort for an aim bot bundled with your script you will get high end slaves with gpu so you
can either use them for miner or logs

platty - August 27, 2022, 4:57 pm

get any legitimate software like a cracked vpn or game or a cheat or something and bind it to your
malware and have literally a basic landing page that looks really neat and legit. its up to you to
promote it, some people make youtube channels and jack up the views and the comments i know
youve seen those before.

127002 - August 30, 2022, 7:14 am

use exploit and spread it. u shall get large no. of slaves at your hand
