Thread: [\[NEW METHOD\] EARNING \\$750+ PER MONTH THROUGH REDDIT](#)

padme - August 16, 2022, 7:35 pm

In it I will talk about the system where you will get automatic earnings using applications such as python, reddit, telegram and discord. I have been using it flawlessly for more than 1 year.

?All you have to do is follow the Steps carefully.

Used programs

Excel (where we will keep the data)

Thonny (python program)

Desktop telegram application.

The desktop discord application.

I discovered the system by a reddit user I've been following for a while now. He's making huge money with a bot. The thousand dollars I'm talking about here will be an ear for him.

Let me briefly talk about the operation performed;

The content we have obtained from several telegram channels.

<https://publisher.linkvertise.com/ac/162827> using the named site, we turn it into a short link. In order to access these links in users, they have to watch linkvertise's ads. In this system, publisher, that is, allows content publishers to earn a considerable amount of money.

How do we do those who have not used link shortening services before? those who are worried about how we will get on top. Like tell trowel don't worry I'll tell you.

I will give step-by-step visual explanations if you apply this part completely. The system works flawlessly.

?The cost, by the way, as Dec, is just the effort spent and the electricity bill.

My achievements :

Here are my recent earnings -> <https://i.hizliresim.com/szvspbi.jpg>

My average daily earnings - > <https://i.hizliresim.com/elgnzxs.jpg>

this is written as \$587 in my monthly earnings.

Deccount: <https://www.hizliresim.com/e5fxijt>

!!!EDIT!!!

A thousand dollars a month has increased to an average of 2200-2300 dollars for the time being. The Telegram bot continues the same.

Editing has arrived on Reddit and a different system is now being used.

New Reddit python codes- > <https://pastecanyon.com/CR2YBy7uoE>

Here is the user for Reddit.create xls
-> username on the first line
-> enter the password on the second line
-> api id on the third line
-> api secret will come to the fourth line.

You can share the content on the reddit user profile and add a comment justetext.com you're messing with his link. then there is a "More Option" button on the reddit profile, from there we click on "Profile moderation". At the bottom there is "review spam", we click on it and approve our content.

then we start our boat.

The first fruits of the system

Yes vouch copies are available, would you like one?

bk randy - August 16, 2022, 7:47 pm

Okay, first of I'd like to say I don't have much experience with the python program in the method, but OP assured me it is very simple. It is a long text upload that is very detailed explaining all the steps and navigation. It comes with examples of how your link should look and work with tips throughout it all. I don't normally review methods, but I was interested in monetizing links, and I will say this seems like a pretty fresh method, it is made by OP for sure as I can tell in the grammar, and it doesn't seem like it can be saturated.

One of few methods worthwhile to buy on HF. Deffinently check it out if you're thinking about it.

Thank you OP!
