Thread: [Dedicated IPv6 Proxy Servers \(60,000 IP's Per Server\)](#)

Proxies.tv - August 18, 2022, 4:23 am

This service is in regards to dedicated ipv6 proxy servers. Each server holds 60,000 HTTP(S) ipv6 proxies pulled randomly from a /48 allocation. These are unshared and dedicated to one client only per server. (Only one proxy pulled per /64.)

List of locations available:

United States (California, Virginia, Missouri, Florida, Nevada, New York)

Canada (Castlegar, Toronto, Vancouver, Montreal)

United Kingdom

Australia (Adelaide)

Hong Kong

India

Singapore

Taiwan

Mexico

Germany

Spain

Finland

France

Italy

Luxembourg

Netherlands

Norway

Poland

Russia

Sweden

Ukraine

United Arab Emirates

New Zealand

Argentina

Brazil

Chile

Colombia

Delivery format: IP:Port:Username:Password (Text file)

What can ipv6 proxies be used on?

Google, Yahoo, Bing, Yandex, DuckDuckGo, Facebook, Microsoft, Whatsapp, Spotify, Skype, Gmail,

.....and any website that sits on a CDN (Cloudflare for example) or natively supports ipv6.

Monthly Cost per server holding 60,000 ipv6 /48 proxies: \$125.00 USD

And yes, trial servers and vouch copies are readily available.

I'll be honest, I was pretty dubious about the service offered; I've done a lot of shopping on HackForums, I stay pretty quiet, but here I have to say I'm speechless.

My project required a small number of proxies (150-200) but with a very fast response.

After talking with the OP, he seemed to tell me that 60k IPv6 proxies were easy for him to get, and that bans for scrapping for example were not more restrictive on large blocks than for IPv4. He spent a lot of time answering my questions, always friendly, hyper comforting in case of problems - I just asked for a particular service to facilitate the functioning of my software in exchange for payment, without flinching he told me there was no problem to implement what I need, and that he would take the charge on him.

Let's agree, indeed IPv6 much easier to get, but for 120€ per month, a guy who takes the time to answer and take care of you, it's rare, especially here, so, thank you OP, I wish you wonderful sales. 60.000 IPs, each one working as intended.

I specify, my needs are for the moment not very high, so obviously ask useful questions for you before your purchase.

Thank you again OP, good luck with your sales !

I thank you very much for your response on my thread here. My general idea is to talk with each client, find out their particular needs, then recommend what I believe in my opinion would serve them best. Your needs were particular, and our discussion surrounding that was particularly helpful to me because it provided me that extra bit of information to further customize the product to your particular needs. You are a great client, very polite, and a pleasure to work with. :)

Updated the list of globally available locations. See first post.

Sticky Bot - September 9, 2022, 12:39 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not

get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on 09-16-2022. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Proxies.tv - September 14, 2022, 9:57 pm

Yesterday we took a long hard look at the fairly new IPv6 Dedicated Servers program and we listened to early client feedback regarding this service. And we revamped and added a few features to this service that were not available in the initial rollout of the service. As of now, we've added the following new features:

- 1.) We've reduced the amount of open ports from 60,000 to just 5,000 to enable the servers to run faster.
- 2.) We've added auto-timed ipv6 ip regeneration. This means the entire proxy system has the ability to regenerate the entire 5,000 ipv6's currently embedded into the system. This is state of the art because its the first system that can retro-actively regenerate ip's from the whole ipv6/48 allocation. Under the old system you had a hard limit of 60,000 ip's that could not change. Under this new system, those 5,000 ip addresses can change on X minutes intervals. This means you can have your own personal infinte proxy system that literally has no cap on the amount of ipv6's that are possible. Regeneration takes approximately 6 minutes or less and replaces all 5,000 proxies currently on the system. The system can regenerate those proxies on any time (minutes or hours) interval that you desire.
- 3.) Under the old system we only had auth by username and password. Under the new system IP Auth is available, as well as traditional auth by username and password.

Has anyone tried these with Youtube views?

Proxies.tv - November 17, 2022, 7:58 pm

(Nov 17, 2022 11:42 AM)urk Wrote: [\[CITE\]](#) Has anyone tried these with Youtube views? Most people don't have youtube in mind realistically. Most use these types of proxies as web traffic, ad traffic, and similar sorts of projects.

Ok, but is it possible? Just looked on your site and found this page, <https://www.proxies.tv/knowledgebase/9/Best-Method-for-Youtube-Views.html> . I just need a cheap solution because mobile proxies are somewhat expensive for my budget.
