Thread: [HWID System \(with Server Panel & Key Generation & C++ Loader Demo\)](#)

**Spec** - August 23, 2022, 10:30 am

There is only ONE copy of this for sale.  
I am the sole creator and owner of this entire project.  
The template was bought on Themeforest.

Features:

Encrypted dynamic communication between client and server.  
Files stored encrypted on server and only get decrypted in client memory upon use.  
Demo in C++ (with full source code).  
Spoofed HWID detection (included in c++ demo).  
Ability to create and distribute keys with expire date and max executions.  
Full control over keys which include extending, banning, modifying executions, view known HWIDs, etc.  
Keep track of everything with detailed logs per key.  
And a lot more, please watch the video to see everything.

What do you get?

Full source code of HWID Panel and the Demo (loader) with database. Support from me.  
And we can discuss additional features you'd like to see added.

Video showcase of product:

[Video: <https://youtu.be/ZBKgivsSu74>]

Price:

€2000 euro IN BTC gives you the only copy of the entire system and full rights.  
[contract=tid]Start Contract[/contract]

**Spec** - September 2, 2022, 9:01 am

Price has been lowered to €1000.

**Spec** - September 5, 2022, 7:57 am

Bump! This is still for sale..

**Blue Eye Samurai** - September 5, 2022, 8:10 am

There are open source projects such as KeyAuth which are far more securely developed plus these can be self hosted for free.

Mine is way more secure than KeyAuth and mine is also self hosted.

How would you even know they are more secure if you didn't even look at the source?

self hosted.

How would you even know they are more secure if you didn't even look at the source?

Exactly. Since a potential buyer has no way of auditing the code before purchase, therefore we cannot know if this is actually secure or not.

I can certainly setup a demo for any potential buyer whereas they can test it.

Please do, I would like to test. Please don't blacklist virtual machines, myself and perhaps others want to test this on a virtual machine.
