Thread: [Lola | Wallet & payment gateway | Safe crypto haven | No KYC/AML](#)

DeepWebVPN - September 3, 2022, 12:48 pm

Crypto wallet and crypto payment gateway [Run.Lola.Run](#). NO KYC/AML. NO chain analysis. NO verification. Lola doesn't need your privacy data, Lola needs your money!

Run.Lola.Run is the native payment gateway and crypto wallet of [DeepWebVPN](#). DeepWebVPN could not follow [his own rules](#) without Lola. It would be danger for finance security of DeepWebVPN, Lola removes possible financial pressure.

Lola doesn't work with crypto exchanges, banks etc, Lola disdains them and other "fashion" trends of the modern crypto projects. Lola exists in the Internet only. This position is described in details in the [User Agreement](#). For details read [long text](#) about basic differences between Run.Lola.Run and other crypto wallets and crypto gateways.

Lola supports 6 cryptocurrencies now: Bitcoin, Litecoin, Dash, Monero, ZCash (t- and z-address) and Bitcoin Cash. Lola doesn't stop working on expanding the list of cryptocurrencies.

Lola wants your money, but Lola is not greedy. 0.3% fee for transfers to external addresses and 0.0% for internal transfers and incoming transactions. Min payouts are 0.00005 for BTC and 0.001 for altcoins.

Lola has APIs for receiving and transfer cryptocurrencies, APIs for receiving payments etc. Lola is constantly expanding the list of APIs. API docs in English: <https://docs.lola.run/en/apiv1>.

P.S. Lola will be glad to cooperate with everyone, and also sends a special invitation to novice online services and shops. Lola will help with the software integration.

Lola news

[API functions that shows currency pairs rates](#) were added. The new functions allow get exchange rates and simple moving average (24h) both of all available currency pairs and specific pair. The

[new API errors](#) also were added with the new functions.

DeepWebVPN - *April 5, 2023, 8:58 am*

Lola news

The new API functions were added: list of transactions (wallet-transaction-list) and list of payments (payment-list). So now user has full control his accounts and payments using API functions only. Documentation of the new APIs is already available in the manuals: [list of transactions](#) and [list of payments](#).
