Thread: [Toxssin - An XSS Exploitation Command-Line Interface And Payload Generator](#)

DI?E - September 6, 2022, 6:01 pm

Toxssin is an open-source penetration testing tool that automates the process of exploiting Cross-Site Scripting (XSS) vulnerabilities. It consists of an https server that works as an interpreter for the traffic generated by the malicious JavaScript payload that powers this tool (toxin.js).

This project started as (and still is) a research-based creative endeavor to explore the exploitability depth that an XSS vulnerability may introduce by using vanilla JavaScript, trusted certificates and cheap tricks.

This will definitely help a lot, I will dive into it later tonight. Thanks

afrckenway76 - September 12, 2022, 12:14 am

Cool stuff man, not very experienced at all with XSS vuln but ill check this out. if i get my win7 lab back up maybe i can bring it online and test it when i have free time

Jee098 - September 20, 2022, 10:06 pm

Better use beef framework
