Thread: [Web Developer Required \(E-Commerce Website\)](#)

DamienVC - September 11, 2022, 6:43 am

Note: There's no strict requirements on which tech stack you work with. We have currently completed websites in the LEMP, LAMP stack and TALL stack so it's an added benefit if you're able to work with those technologies but we are open to starting from scratch granted our requirements can be fulfilled. Our only requirements will be long-term scalability and efficient load times. We're ideally aiming for a Minimum Viable Product (MVP) suite that works in a plug & play function so we can expand effortlessly and not be constrained by any rigidity in code.

Requirements: We're looking for an experienced developer, full-stack or backend-oriented (we can hire a frontend developer to work on the UI/UX/theme alongside) who is able to code an e-Commerce website with the primary function of selling digital goods integrated with payment methods & with additional functionality to provide customer support, feedback, etc. The website is fairly similar to a digital store like Payivy, Hexpay, Selly, Shoppy, etc.

- 1.) Login System, Account Roles/Ranks, Loyalty Tiers & Discounts
- 2.) Product System, Product Types (Subscription, Code, Serial, etc.)
- 3.) Shopping Cart, Discount System (Tier-Based)
- 4.) Ticketing System, Product Review System
- 5.) Balance System, Transaction History
- 6.) Payments System with PayPal, Stripe, Coinbase Commerce, Binance Pay and PerfectMoney integrated.

These are just a few main tasks from the job to provide a gist to potential hires regarding complexity & workload. The exact details will be shared in the form of a Kanban board with user story / use-cases for each function once we reach an agreement.

Timeline: Completion required within 6-12 weeks' time after commencement.

Payments can be arranged in any common method (PayPal, Wire, Crypto, etc.).

We operate on a flexible budget so we're looking for quotes and we can move forward from there.
[contract=tid]Start Contract[/contract]

Raymond Reddington - September 11, 2022, 6:58 am

I can confirm that we're actively seeking a developer right now. Feel free to message me or Damien if you fit the requirements.

Sticky Bot - September 11, 2022, 8:12 am

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on 09-18-2022. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

I sent a convo message to both of you explaining my abilities. If you find me a good match for your requirement, we can proceed further. I am able to handle this requirement very smoothly and comparatively faster.

I've sent you a message regarding this. Looking forward to hearing from you.

Legacy - September 13, 2022, 12:12 am

5 yeo SWE. Let me know what you gonna pay.

Uriel Septim - September 15, 2022, 6:55 pm

Deadline is tough,

I would be able to complete this job in Node/Angular & take care of devops.

If I only have to deal with the backend & devops (selfhosted, dedicated, microservices, clusterised, AWS, Azure ...) i'll quote you anywhere between \$3500 & \$4500 depending on if the features list above is exhaustive or not.

frontend would be another \$2500, but if you can get another guy for the job it would secure the deadline a bunch more.

Prices can seem high but this is much less than what I would quote IRL and the deadline is short. I'm a freelance fullstack dev in France, CTO & owner of a \$6.000 MRR B2B SaaS so I know my shit and can prove it in a meeting. Everything would be done from scratch with GitHub CI for daily updates/dev deployments.

HMU if interrested or if you want to schedule a zoom/discord call, if not good luck with your project, shouldn't be too hard to find someone able to do it correctly !

Please pm me with full project details so i can quote you a fair price.

Chroem - September 17, 2022, 4:41 am

I can absolutely do this! Can you give more details, so i can give a fair price?

DamienVC - September 17, 2022, 10:53 am

Hello there, I have been pre-occupied lately and so has Ray. Rest assured the job is still on the table and we haven't finalized on a hire yet.

We will get back to this very soon.

Bear - September 17, 2022, 8:02 pm

If you're paying a fair price for top quality work and a fair deadline, i can take this on.

Have the necessary creds to show why and how i am a good fit for this project.

Can be reached via discord or telegram, upto your preference where you want to proceed conversation. Looking forward to speaking with you all!

moggyness - September 30, 2022, 11:22 pm

Can't be done well in that timeframe. Not if you want it built from scratch and it's a one-person job. If you use a good open source project as a base it's doable. I can't go as low as the highest quote I've seen in here but I've been an SWE for 15 years and I work for a company you've heard of.

better call - October 2, 2022, 3:24 am

I think i can be the perfect guy if you are looking for FrontEnd Developer (in JavaScript & React)

I am able to understand PHP as i've used too. (mainly to wrote API about payment processor (credit bank), mysql, database management)

I've worked and maked this e-commerce from sratch <https://www.verhoeven-joaillier.com/>

Flyrect - October 2, 2022, 5:08 am

Honest Suggestion : All the features you asked is available on Shopify.

If you still need a custom one, I can make one based on woocommerce platform

Let me know

Hi there, the offer is interesting however we're primarily looking for a backend developer as of the moment. I've a few frontend developers lined up however I need to assess their compatibility with a backend dev.

Let me know

It is, however with Shopify you have loss of control and lack of full customizability.

I've used both Shopify and WooCommerce before and I'm looking for something with fairly larger autonomy.

On topic, my schedule should free up soon so I'm open to exploring options.

Shone - November 19, 2022, 2:09 pm

Oh, you still didn't find anyone to pick up this project?

I remember we talked about this(?) project a while ago.

Good luck, I hope you find someone soon as the project sounds very interesting.

Uriel Septim - November 19, 2022, 2:30 pm

Still up for the backend work, I guess if you didn't take time to answer my offer its because it was too expensive, i'm open to discussion, good luck with the whole project tho.

better call - November 20, 2022, 12:02 am

@damienVC

Alright wrote too the PHP & MySQL stuff related to this project but it something i don't wanna do again since i specialize in the FrontEnd Field.

However since i have some experiencies in this field i could understand the backend.

Can too write Unit Test to cover everyfield and make sure all work as expected.

Anyway let me know if you need some JS Developer.
