Thread: [HOW TO HACK WIFI PASSWORD WITH PHONE NO ROOT](#)

killua - September 12, 2022, 2:47 pm

THIS IS ONE OF THE BEST METHODS TO GET WIFI PASSWORDS FROM PHONE! MAKE SURE TO CHECK THIS OUT! ALSO SUPPORT ME 10/10

1. Install and run a tool
2. Select network u want to crack
3. Let tool do the magic 10/10

It doesn't work anytime! There is a Probability Score next to it... If you find network with green mark u should get it!

Account closed so removed the attachment, OP shared an old version of the following app that can find on the PlayStore :

I've seen apps like this. They are joke apps that give random passwords for fun only. Few phones have WiFi chips that can be run with modified drivers to enable monitor mode, and using external USB adapters is also a lot of work with driver support. Root access is also required.

I guess I need to reiterate my earlier post. This is a joke app. There are multiple apps on the Play Store like this. I know because working hacking apps are not allowed by Google's terms of service, and phones don't have the hardware and driver support to crack WiFi. And you can't tell how easy it will be to crack a network by scanning it.

It looks like people still aren't going through the replies to see if this works, so I'll try again. I don't know what this is, but the Play Store has (or used to have) one or more "wifi password cracker" apps. These are joke apps that state that they don't show real passwords. Sorry for those that spent Bytes thinking that they were getting a magic hacking app.

I did find one app, and it has real WiFi pentesting tools.

<https://play.google.com/store/apps/details?id=com.wirelesshacker.android> They will not run on a stock phone. I have not been able to get monitor mode working on my phone, so good luck. Try flashing a Kali Nethunter ROM if you want.

Oh, it's a WPS app. Good luck getting any PINs with that.

'Course it isn't. These apps are either developed as a joke or rely on WPS PIN, which no one should have enabled. Handshake capture is the only way before 4-way handshakes are completely obsolete.

For some idiotic reason (probably all the idiots who keep bumping this old thread), I did spend Bytes on it. It links to a WPS cracking app. All yuo need is a time machine to the 2000s, and you're set. You need root at minimum and maybe a custom kernel. PCs are much easier.

The user is closed. You can still unlock the attachment and see what it is, but it's just a dumb WPS cracker that has been blocked by Google since Android 10 or so. Vulnerable access points are also quite rare today.
