Thread: [\(Sold\)Buying A Username Availability Checker or Username Availability Checking Script](#)

SRT - September 20, 2022, 6:13 am

Edit: I have bought it off someone, don't need it done anymore thanks.

Hi,

I need a username checker or sentry mba script made, the website doesn't have captcha but it doesn't have cloudflare protection. I basically want to load up a list of usernames/numbers and i want the username checker or sentry script to scan if the usernames are available or taken.

No account login is needed to check the availability of the usernames, you literally have to type them on the homepage and press enter and it tells you if they're available or not.

I wsnt it to work with proxies as well just incase the website bans my IP.

Just Found out that the website has cloudflare protection

The website only accepts usernames with 2 - 6 letters/numbers.

I need a really simple sentry mba script made, the website doesn't have captcha. I basically want to load up a list of usernames or numbers and i want the sentry script to scan if the usernames are available or taken.

No account login is needed to check the availability of the usernames, you literally have to type them on the homepage and press enter and it tells you if they're available or not.

I wsnt the script to work with proxies as well just incase the website bans my IP.

I want the available usernames to show up in the green hits section on sentrymba.

Hmu need this done asap.

Awesome, openbullet will do.

PM me

Still looking for this, if u can do this PM me

Hit me up with some details.

007 - September 20, 2022, 1:16 pm

Has cloudflare protection, heads up for anyone who wants to help OP.
