Thread: [Problem with AsyncRat](#)

Atsu - September 21, 2022, 12:10 pm

Hi all,

im learning recently "hacking" and i was interested by RAT. Im using Async RAT cause its free and apparently not hard to use for a beginner like me.

But I have a problem.

I download AsyncRAT on github, i want to test the effect on myself in order to verify if all is working. But the victim (me) downloaded the file then opened but i still cant have my device.

I've put my DNS and port of course.

Someone have an idea ? ?

Check on [canyouseeme.org](#) if the port you are using is actually open.

Yeah it's probably because your port isn't open or you just put the wrong port in while building your stub. Check that out OP.
