Crypters Market in a nutshell

Im posting this to warn everyone about scamming schemes which are ruining hackforums marketplace, they are mostly affecting new members.

First let me explain you two types of threads which are most common:

1. Fake GUI - application which is imitating a real crypter, doesnt require any coding skills and can be made with ease. In most cases its just graphical interface and does absolutely nothing, sometimes it attempt to infect your device.

2. Crypting service / manual crypts - in this case the seller just buys a monthly subscription of a crypter and is reselling single crypts to unaware people. This is less common, but still straight up scam. Dont get me wrong, there are 1-2 crypting services here on HF which are real and can be recommended, but 99% are just scams are resellers of public crypters.

Let's take into consideration first 5 pages of Cryptography and Encryption Market Section [Cryptography and Encryption Market](#)

Each page has 20 threads, that makes 100 sales threads + 5 Paid sticky threads.

Summary Page 5#:
8 scam threads
12 unknown threads

Full summary:

Out of 100 threads:
- 41 are confirmed scams
- 59 are unknown.

Out of these 59 threads i know that there are only 3-5 real developers which are actually selling a real product which has been coded by them.

Also out of these 59 threads i think that AT LEAST HALF ARE JUST SCAMS TOO, but not exposed yet.

My thoughts:

Im not very good at probability but i think its VERY clear that a new member searching for a crypter will almost always end up scammed.

I know that its pretty easy to spot these scams, everyone should do basic research before dealing with someone, but unfortunately most of people dont do that.

New members just see a fake GUI or fake video and are mostly ready to throw away small amount of money to the scammer.

I think [Cryptography and Encryption Market](#) section should have a similar warning to this [Hacking Tools and Programs](#) - <https://hackforums.net/showthread.php?tid=6143720>

Selling crypts from a public crypter is the same as selling "loads" from someone else's botnet. Half the black market here is a scam lol

Ph4n70M Phr34K - October 5, 2022, 1:25 am

The scammer is still creating new scam threads. Now he asks only for 20\$. Literally trying to scam for a big mac

Take a look at this thread: <https://hackforums.net/showthread.php?tid=6223120>

Seems legit ? Now check his other thread and read my post:

Never trust anyone who uses a .TK domain.

If they won't spend \$5-10 on a domain, it's obviously not a product worth putting money into ?

Nice thread OP I hope more people see this.

I always see this scammer that you mentioned on the crypter market he gets a lot of customers before getting banned then he comes back.

He also runs the scams on his telegram group, I have also seen him scamming people by giving them a fake docx or excel exploit claiming to be silent.

Pretty much nothing more could be done. People just need to use common sense and middleman while dealing with new members.

Keep in mind you dont really need any specified knowledge to spot this type of scam. Common sense is enough to not believe in miracles.

Members like [DeepWeb](#) vouching for a persistent scammer doesn't really help in that case.

Thats pretty ridiculous to be honest.

After reading the entire thread, I was amazed. You nailed it with every statement. I've been purchasing from the cryptography market for a long time before actually starting to learn on doing them on my own, but almost all the experiences I had were related or basically 100% the same. Should you be kidding? This guy seems to have taken money from other crypter seller and won't let a new product happen to the grocery store This guy is crazy. I'm not sell crypter lol I m saying I'm going to give it away for free what's your problem?

Only here you can trick new users and sell 5 years of shitty products to him. But you can find me on a short research :). Don't give these guys money. We market the products these guys sell on free github and I have all the shitty source code I can share it if you want, I don't want to embarrass you.

Ads from other crypter vendors you make can only fool novices. We know the facts, and I'm sure the people here do. Don't worry that I'll be privately posting the source code of most of the crypters you advertise on your own github. Many of the projects I intended to give away for free would be better than the product you advertised. Smear me as much as you want, and if I can't be here, I'll be everywhere else. You're just an advertisement and you're empty before you buy crypter I have to tell everyone that they definitely shouldn't buy your shitty products. Because we provide it for free. Come on but you can only find me with a research I know it won't get me in here but I'm going to share it for free everywhere and you keep advertising shitty 5 year old products here asshole guy.

If you find me on YouTube with a little research, watch my tutorial videos in Golang or Rust and show me to your brothers that you advertised.

If you think I need money, you're wrong, I already share most of my products for free.

Where is the similarity? I can't see it?

Watch my lecture videos and show me to the older brothers you advertise. I'll upload a lot more. The products you sell as EDR can't even do sentinel bypass lol.

Go and pay that fraudster Pure Crypter - Data Encoder - RAZ Crypter - Byte Crypter. Add me from telegram and I'll show you the source code for all of them with anydesk? I know why these guys don't bring someone new into the grocery store. Because we're dropping their sales.

These guys won't even let me share anything here for free. Because they won't be able to sell themselves, lol.

HackForums is really in the dump and hopefully you will get out of this quagmire and try to introduce other products because the products you sell have no value at all. Or best of all, find me on the real EDR and UPP crypter. Follow me on youtube watch my tutorial videos maybe you will learn a few things.

I'm going to design custom crypters at affordable prices, but you keep drowning here. I won't even charge those people if I have to. You were never going to mess with me because I'm not one of those people you think I am. I didn't know you, but you're in trouble, now I'm going to go into your dreams and stop those people from paying you.

I'm a maniacal keyboard gun. I can code until morning. Everything was going to be fine before you smeared my product, but you got into trouble. I will share all the methods for free, don't worry at all.
EDIT:

New scam incoming. He is now bragging out to me about that. What an poor idiot

Oxidation - July 13, 2023, 8:43 am

It would be nice to see the section cleaned up a bit. Especially considering the amount of hard work it takes to actually make a crypter.

Super difficult to keep up with detections these days. Hence, I don't offer my crypter anymore. I was selling @ 75\$ per month, and still felt like I wasn't charging enough for the amount of time I had to spend keeping customers happy.

WizKhalifa - August 10, 2023, 5:32 am

Should also add a trusted list of vendors, because I wasted a lot of time and money on this forum already to find a valid crypter/guy who do good work.

Because I still didn't found any good seller expect the owner of seller and RustCrypter but now it's closed lol...

After a short break, new scams started to pop in.

kosa5tk - October 10, 2023, 6:33 pm

so who is the legit and not a scammer ? so please advice one that it's service is legit ? thanks

ScrubspooF - October 10, 2023, 6:49 pm

ScrubCrypt is the best crypter you can buy. It is FUD for over a month usually before it needs a new stub.

Ph4n70M Phr34K - December 23, 2023, 5:28 pm

Quick bump.

The scammers adapted and evolved long time ago.

Private, manual crypts stays in the offer.

The trends are now web-based builders, not only for encrypting but also imitating known exploits and other malware that becomes popular - browsing through the marketplace, already spotted many active threads.

ZeLizzard - December 23, 2023, 6:32 pm

One thing to take into account is the pricing and customer saturation. Some sellers get too deep and their product starts to decline. You also have the ones who try/do resell

Ph4n70M Phr34K - January 2, 2024, 4:10 am

Today i present you a great example why nobody should be blindly trusting any vouches, reviews and pixels that we can see here.

Spoiler ([Click to View](#))

"There're 2 members which have bought the source code from another user in this forum."

So the two members in question are called RobinHood and DeathDealer.

"The two buyers then brought in a developer to fix this and improve the product."

The so called "developer" is named AnonCrypter here.

For some reason, one of them sent me a PM, out of nowhere, confirming all the above.

Spoiler ([Click to View](#))

The second guy (as it says in "backstory") has a sales thread for such product, so everything is correct.

Spoiler ([Click to View](#))

So far everything is alright, a common scenario.
Unless they start vouching for each other.

Spoiler ([Click to View](#))

Notice, how they are pretending to be normal customers.
Just a happy coincidence the guy is selling on their behalf.
They forgot to mention it, happens.

Are those vouches legitimate and honest or maybe it would be closer to call them fake?

bro you're just mad and its not death whatever he is called the 2nd buyer of the source so stop making up stories man you're making yourself a joke

well i got the updated version from anon and its working and i posted my review i dont get what's your problem with that?

isnt a sale thread supposed to have reviews????!!

i get that you're mad cause your friend couldn't fix the detections and anon did

so you better keep me out of this mate or im gonna report you for creating things in your mind and say im a part of a scam(You made inside your head)

im not selling and never sold anything here and i get nothing out of anon

Not really, just having a boring online class right now that is fully out of my interest.

DeathDealer is literally a 1:1 copy, even with the same typos:
For example "ASMI" instead of "AMSI".
The exact copy - fresh account - belongs to the same group as you.
You are telling me this is not the same product ? Oh well...

Put away your emotions and reread my post.

Not really, i would say the anger clearly emancipate out of your post, not mine.

Anyway i dont really understand this part. Who is my friend?

The original developer of the source you bought? I dont know him, literally never spoke to him not even once.

Or Scrubspoo? He is not my friend, i spoke with him like twice or so, a year ago.

Last time i nicely told him to fuck off for some reasons that doesn't matter on here.

Yesterday:

"we bought the source code from the old seller since he couldn't refud it or do fixes and we brought it to mr anon to have it fud and fixed again"

"i bought the source code with my own money and i will keep working on it and you can keep doing your small thing called (exposing scammers)"

Today:

"im not selling and never sold anything here and i get nothing out of anon"

You are just making yourself looking like a fool...

You been caught doing shitty stuff. Just accept it and move on, instead of posting even more bullshit, nobody really cares.

You are not the first one doing so, nor the last.

I dont really need to "keep tracking your foot steps".

You have already embarrassed yourself.

I only pointed out your posts and you proved my point.

Your buddies must be mad at you for your stupid moves.

Also based on your reaction i can assume i could double your age.

But if it makes you feel better, you can call me kid.

Good thing is that you've calmed down already.

I like HF, its rules and community.

Bad news for you, i have no plans on moving on.
15 minutes that i spent to combine your posts, wasn't wasted.

what a grown up guy still creating things in his head its actually funny bro literally said "Your buddies must be mad at you for your stupid moves."

what buddies mate XD?

i repeat again i get nothing out of this and i never sold a service here ever and not doing currently

anon got my permission to use the source i bought and here he is fighting with a kid who creates stories in his head

mate idgaf about your or about hack forums you can have it for yourself XD

stop acting as if i came against you first you're just harrasing people's sales thread with your shit
(you know the rules very well as you said but you still violated them XD)

beside what did i embaress myself with bro?

you and anon can go fight each other all day i couldnt care less

i thought this community is full of grown up people working for what benifits them and all not acting like an ex girl friend getting revenge exactly like you're doing right now

end of discussion have a great time

You brought me to this, i had no idea about your existence before you sent me PM.

Yes, i know what i did and why. I have violated rules on purpose obviously.

Im not your bro. Im not going to repeat myself again and again, there is no point.

Just reread again my post and your bullshit stories that doesn't make sense.

Clearly you got lost in your answers.

I dont know you, i had no idea about you before you pmed me.

I have only exposed your actions using your own posts and messages, literally.

Only screenshoted your posts and messages and posted them together.

You have already said this in your previous post. So i dont really believe its "end of discussion".

You have said a lot of things that turned out to be not true.

You can keep it going but dont forget, i didn't post everything yet.

The cherry on top is still waiting.

Regarding Mr.Legit

His own group channel:

Spoiler [\(Click to View\)](#)

Advertising fake exploits on his own channel.

Scrolling this more there also other known scams. More connections to old scams.

He doesn't even care to hide it.

And some people on here are defending him. Disgusting scums.
