Thread: [Best way to scan windows machine with nmap](#)

colbsgotguap - October 2, 2022, 3:12 pm

I have tried multiple different scans and I have a good understanding of how they work. I have also tried splitting up the packets and spacing them farther apart. My windows machine firewall is set to the default settings and I'm not getting anything. Could this be something to do with my router? Or am I going about this wrong
