Thread: [Suggestion when mentioning someone in a post.](#)

Goods - October 3, 2022, 8:19 pm

This may have been suggested before or may not be possible but, instead of having to "[user i.d]" to mention someone. Would it not be possible to implement something like "@user" while providing a drop down box to make it easier and more accurate to mention someone in a post?

Just a thought.

Just a thought.

Our mention system is username enclosed in @ symbol.

Code @username@

It doesn't do a dropbox and I don't believe I will be adding it.
