Thread: [\[METHOD\] Using social engineering to dox - The False flag operation.](#)

Investor - October 4, 2022, 12:56 pm

Hello and welcome to one of my first guides on using social engineering to dox someone. Particularly we'll be looking at false flag operations.

The same tactics used by scammers can be utilized by you to trick your victim into doxing themselves.

[Method 1]

Go sign up for surveymonkey, and sign up for canva.

Next go ahead and create some promotional material aka an advertisement for a survey with a drawing.

Now make it simple, there is a module where a person fills in this information. Usually something believable like a \$50 amazon gift card is enough.

Now post the advertisement, and if you can elicit the victim to participate in the drawing directly, or indirectly. If they suspect you, you can use ewhoring to your advantage to create a quick friendship under a false persona, or enlist someone else's help to pass along the survey, and encourage participation.

Since it's a "physical prize" it will require an address. They will dox themselves.

[Method 2]

Similar to method one, the person should be given a gift card code as a "gift" for an ecommerce shop opened by you which is obviously nothing more than a front to get them to place an order, since it's a gift card that'll cover 100% of the purchase and shipping it isn't related to fraud. But by the person providing their shipping details they will automatically dox themselves.

Hopefully this will give you some insight into being creative with your doxing methods.
