How much does this cost to maintain and make sure messages go through?

Do you provide Captcha Bypass? Do you need residential proxies?

Include all of this in your listing so people know.

From my understanding most of these programs need, Captcha Bypass, HQ Residential Proxies, and

plenty of HQ Aged account and by the time you get into these three things you're paying quite a bit of money

to maintain messaging since Discord is OP now.

\$250 lifetime is very high if you're not including all of these things as your competitors are at around \$50 lifetime without those specifics included and no this is not to down your product or crap on your pricing I am just truly interested in what makes it worth \$250 and If it's worth me investing my money into this for that price point. Reply with more info and you may make or break a sale.
