Allow an attacker to run arbitrary code in the context of the current user by failing to properly handle objects in memory, aka "Microsoft Office Memory Corruption Vulnerability".

Version 2209 Build ID (15629.20156) (All System Working (x86, x64)

[Video: https://youtu.be/_KrDtHwwbFc]

Notes:

- To authenticate you will need to decrypt the BASE64 decoded password. But if you still don't have any idea on how to decrypt the password, post here and I will PM you. Please don't PM me.

- Don't PM me asking how to use this exploit to execute your .exe file. If you don't know how then you don't deserve to use this software.

- Python and .NET Framework are required! Make sure you have them.

Be careful of this seller. Took my friend's \$600 without delivering exploit and crypter. He is a scammer.

He bought your crypter (private plan) and he also paid you for your exploit which you did not deliver. You deleted all chat and blocked him when he complained about you not delivering what he paid for.

Multiple licenses were sold for this money. There is nothing remotely related to Exploit.
Also, the name I do multi-license trade is not Golden Boy.
Like I said I don't care about you you need to understand that you don't care

Hmm, "SILENT EXPLOIT" in this new age!!!! I doubt it. But if you're sure give out vouch copies to cool fellas with good profile's ratings out there. Their vouches will determine your sales.

However, I notice many outdated malware(s) on this list like AlienBot, so they must track by quantity as seen in the wild.

Interesting, thank you for the information.
