Thread: [Free electricity Crypto Mining in 2022 ?](#)

VNT - October 26, 2022, 5:07 pm

I'm given an opportunity to build a mining rig, and either GPU or ASIC Profit is not the issue since the rig will be used to heat a large storage space and the business is paying for electricity. we got a 600amp panel if I'm looking to break even the fastest what method and miners should I use?

I have about 20k cad in the budget to do this

This is quite the project. Let me put some things together and see what I can come up with.

SIM-587985 - October 26, 2022, 6:02 pm

I was thinking the same thing but was turned away by how loud they were.

Is it an apartment?

shreder - October 26, 2022, 6:46 pm

\$20k CAD wouldn't even be enough money to fully utilize that 600 AMP Panel. I recommend for you instead of buying the hardware yourself find miners who will bring their equipment over and take a cut.

Would definitely need some contracts for that, who's gonna be responsible for the miners hardware and stuff. Get that stuff out the way first if you do go that route

Might go grab few s19jpro tomorrow the btu output is decent and they still make decent money, rn the heating cost of the place is 20k per years

So who is paying for the electricity? Because someone has to cover the cost of 1200kWh of power.
