Thread: [CURL grab text from Ajax page](#)

zazas - November 7, 2022, 12:53 am

Hi, how to read data with PHP CURL from Ajax page? I want read text but CURL dont see anything, what I should do to grab text?

Have you tried setting cookies in your curl request?

Yes, I login in that site, everything is ok but I can't see Javascript text, only links visible. I know that site using Ajax and Javascript

Yes but are you specifying your cookies manually in your curl request. It wont take it from your browser session.

Manually no. Why cookies so important at this point? Sorry newbie here.

Cookies are important because they tell the script you are logged in - if that's the only way to see them then you have to specify them.

Yes but he will be running his curl request outside of that session.

I am currently learning about cookies. I understand how cURL needs to be specified cookie in the request. Mr. Robot seemed to understand the point you were trying to make, but I don't.

How do you mean by that?

Login to the website, right click it - click inspect element, click the storage/application tab then under storage click cookies.

Brief - November 11, 2022, 7:27 am

I see what he meant now. Thanks.
