Thread: [Handshake Decryption](#)

vskcode - November 11, 2022, 3:56 am

Hi is anyone here who can help me with decrypting a handshake ?

Thank you so much !

DramaKing - November 11, 2022, 6:21 am

Don't know what you mean by that. Handshakes of whatever type aren't encrypted. They can't be because key negotiation must happen during or after a handshake.

vskcode - November 11, 2022, 6:42 am

Sorry I didn't mention, WPA2 Handshake.

I try it in Wireshark, bruteforce but nothing.

I try it in Wireshark, bruteforce but nothing.

You can only capture packets (including EAPOL packets) in Wireshark. Tools like airodump-ng and hcxdumpool are better for capturing handshakes, as well as tools built on those like wifite, Fern Wifi Cracker, and aircrack-ng.

To the point, what wordlists are you using with Hashcat and does the AP use a default ESSID? You can try posting your hash in this thread and see if someone can crack it for you.
