Interesting question, could you be more detailed lol?

So I can have better view if I can help you :-)

Quit spamming this thread everywhere.

Sign up for Cloudflare.

SIM-5063966 - November 13, 2022, 8:36 am

You can protect your website against DDoS with [cloudflare](#) or [imperva](#)

I agree with this advice, short and to the point??

Cryptochadpupper - November 15, 2022, 1:53 am

This sounds awfully strange, Cloudflare is a good start

Look into call relaying services/alternative means of communication between your customers
