Thread: [\[Tutorial\] Bypass Blocked Websites](#)

SpiritualDose - November 14, 2022, 1:28 pm

How to Bypass Any Blocked Website (Very Easy)

This almost feels wrong to be writing a tutorial for. There's not much tutorial for me to have to give here, this will be very straight forward. Are you a school student trying to get your rocks off? Maybe you're looking to read up on HF and you can't access it because it's blocked.

9 times out of 10 this website that I will be giving you will allow you access into any website that's blocked by your school/ISP.

All you have to do is go to the website, input your desired URL and click enter. Your information is safe, however with certain websites you may want to be vigilant about what you're logging in to.

Code <http://unblockthatsite.net/>

You can do this on a computer, or phone via any internet that is blocking your desired sites.

A lot of content filters block proxies, like mine. I suppose that it's using iframes to embed other websites so that you're not actually visiting whatever site. If that site is blocked, an alternative could be a Secure DNS provider like Cloudflare, Google, Quad9, or OpenDNS.
