The whole website is in English, only the quotes are in Bulgarian also you can view up to 10 000 queries in one page.

I see it now. Earlier all the links were blanketed out with warning boxes from staff. I realize now they were probably blacklisting all their info. Can see now thanks.

You're welcome!

Finished the coding for:

- Nmap Scanner
- Proxy Scraper

We made changes, improvements and bug fixes to the Proxy Generator which includes:

- Fixed the problem where it was generating proxies randomly even if you choose specific ones for example: http, socks4 & socks5
- Improved the code to prevent SQL Injection & Cross-Site Scripting (XSS)
- Added counter to see how many proxies you have been generated

For this type of service it seems fairly reasonable.

Shoppyy.gg accept only BTC, ETH & LTC, if we decide to add monero we have to change the website from shoppyy to something else or have to built complete auto payment system which everyone will have option to add funds to his account and buy the plans automatically. We were thinking to remove the mail function since it doesn't do anything except storing it in our database and that's all. We will think how to recode the Login & Register system in a way that you guys should register using only generated ID, you guys will login using the ID and should keep it in a safe place because if you loose it, you will loose access to your account also you don't have to share it with anyone else, otherwise they will have access to your account.

Thanks for the advice, we will think about it and if we decide to integrate this kind of function we will let you know.

Greetings, The Anarchists - Bulgaria | The Anarchists - Systems.
