Frequently Asked Questions:

Q.Do you use our account to send the messages?

Spoiler ([Click to View](#)) We'll send messages from our Instagram accounts to promote your main account. It's very similar to mother & child method.

Q.What's the conversion rate?

Spoiler ([Click to View](#)) It's impossible to estimate what will be your results as it's different on every campaign. There are a lot of variables like target audience, niche, message, product/service, your content etc.

Someone who's promoting his Pizza shop won't have the same results as NFT Project will have.

Someone who's promoting an NFT and target @nft followers will have different results if he will target @nft.money followers.

Therefore, it's impossible to build statistics, only after trying different campaigns with A/B testing.

Q.How do you get the audience?

Spoiler ([Click to View](#)) We'll scrap your target audience based on your request. We can scrap followers, hashtags, location, likers etc.

Q.What proofs will you provide?

Spoiler ([Click to View](#)) The proofs I'll provide:

I'll send a screenshot when I start

I'll send a screenshot of the amount of the accounts I've sent the DM to on my software

I'll send the list of people I've contacted

Proof for scraping the audience that you've asked

Q. From Where you can filter Users?

Spoiler ([Click to View](#)) Followers / Followings

We can filter audience by the amount of followers and followings they have. We also can decide whether to send to private or public accounts, have a profile picture, if they are a business account, and if they have an active story

By post: likers, commenters

We can target an audience specific to a given post: We can target the people who liked and or commented on the post! We also can decide whether to send to private or public accounts, have a profile picture, if they are a business account, and if they have an active story

Hashtags: owner of posts with hashtag

We can target an audience by users that have used specific hashtags in their posts or stories! We also can decide whether to send to private or public accounts, have a profile picture, if they are a business account, and if they have an active story

Locations

We can target audiences based off of the geotag locations they have used on posts and stories! We also can decide whether to send to private or public accounts, have a profile picture, if they are a business account, and if they have an active story
