Thread: [slicerAD Crypter v1 | Non-fancy web based crypter \(native + .net\) | FUD](#)

slicerAD - January 1, 2023, 8:08 am

Happy new year,

First of all I am new to hackforums.

I wrote a FUD Crypter in C# and want to sell it.

I don't want to focus on marketing, fancy arts etc. Just a working FUD crypter.

Price is high and amount of crypts per stub are limited to not be detected in hours like some other crypters.

After selling the current stock and most crypts are done I will refud/rewrite the stub and restock.

Crypter is web based and payments are done with BTC and ETH onsite via shoppy.gg.

You need to PM me or contact me via discord/mail to create an account (account creation is free).

Stock is currently limited to 30 sells for 75\$ each.

For each buy you get 2 crypts.

<https://slicerad.com/>

I am aware of resellers and crypter scams on hackforums.

Website is ugly but it does what it needs to do. (I hate web development)

ONLY 64-bit and .exe files at the moment!

Features:

- Unique Stub Generation
- supports native and .net executables
- Full String Encryption
- Persistence (Startup, Registry, Environment, Scheduler)
- DLL Unhooking (own process and remote process)
- Self Inject, RunPE for native
- 3 Methods for .net
- Encryptions: AES, XOR, ReverseByteshift
- Payload Wrapper: Bitmap, XML, ZIP
- Storage: Ressource, Inline, URL (Download than execute)
- Selfsigning
- EOF support
- PPID Spoofing (Experimental)
- Error Box
- Date Changer
- Icon Changer
- File Pumper
- Custom CMD commands
- AMSI Bypass
- ETW Bypass

If there is enough demand I will add:

- file binder

Please aks questions BEFORE you crypt.

I only answer questions about the crypter and its options.
I don't answer basic questions you can find out via google.
Crypters were mostly tested vs. WD and I guarantee WD bypass (scantime/runtime/cloud).
You can find scan results of AsyncRat below.
Sometimes niche AV gets detections.
If there is a problem with your crypter, contact me and I add a new credit to your account.
I can make fully private stubs with unlimited crypters if you are interested (1200\$)

Thanks :)

Looks like a solid project, good luck with sales OP! I recommend giving some voucher copies to reputable members from here (make sure they write detailed reviews of the products they receive), that will help you sell the first 'stock' faster and will gain you some credibility.

Thanks. Yes I can do that.

If there are any reputable members interested I can give 2 copies away to do a review and proof that it is no scam.

TP2K1 - January 2, 2023, 10:52 pm

Hi, I'm interested in a voucher copy could I get one ?

hey, I'd be interested in a voucher copy ?

Lyrice - January 4, 2023, 8:39 am

\$75 isn't half bad for a quality crypter.

Last voucher copy.

I send you PM, please write a short review :)

tertily - January 4, 2023, 3:16 pm

will this bypass uac?? and how smooth is execution of crypted files??

ShaXX - January 4, 2023, 3:18 pm

hi. can i have a vouch copy ?

slicerAD - January 5, 2023, 4:31 am

(Jan 4, 2023 04:16 PM)tertily Wrote: [\[CITE\]](#) will this bypass uac?? and how smooth is execution of crypted files??

Currently no UAC bypass.

But I will work on that after File Binder is finished.

What do you mean with how smooth?

Execution is delayed with Dynamic Evasion setting option.

On highest execution is delayed ~30-40 seconds.

On lowest its delayed 1-3 seconds.

This is used to bypass Runtime Detection.

@ShaXX: Vouch copies only left for high rated long time members who will write a review, sorry.

Greetings

(Jan 11, 2023 11:23 AM)hugoSlaveur Wrote: [\[CITE\]](#) Hi man, can i crypt EXE and APK ?

Only .exe files may be crypted atm.

I will add .dll and shellcode in the future.
