Thread: [Desktop ETH Wallet like Electrum?](#)

SIM-5296365 - January 4, 2023, 1:53 am

Hello Hackforums,

I am wanting to know what ETH wallet I should use thats on my desktop, similar to Electrum for BTC and Feather for XMR

Please don't suggest MM

ty

that looks like a good option

is there anything i should be worried about with exodus or is it very good?

Ive been using it for almost a year no problem at all , just backup the 12 phrases in a safe place.

p.s: don't store big funds

if ur storing big funds then there should be no problem in buying a cold wallet. But yeah exodus is fine tho

shreder - January 4, 2023, 7:47 am

You can use frame.sh

It can also connect with your cold wallets.

Frame

A privacy focused Ethereum wallet that runs natively on macOS, Windows and Linux

Always have big funds on a cold wallet. I myself am using a Ledger wallet, costs 60\$ (the one I own) and I rather be safe than sorry.
