Thread: [Device used to collect electronic information](#)

Hexona - January 5, 2023, 1:12 pm

Hello,

If I create this post today, it's because I know a person who managed to create a device with physical material, cable, antenna ... which has the simple purpose of succeeding in intercepting the data gsm around him (a fairly large area) and therefore make spam targeting on the phone numbers around him.

For information it happens in France on Paris, but it must surely work everywhere in the same way given that there are relay antennas everywhere.

Someone would have information on the operation of the thing, what tools, equipment and skills are needed to have this type of thing of course for testing in all legality, I pay for any valid information in bitcoin of very good amount.

Thanks to you.

This would be tracked/triangulated in about 2 seconds of transmitting!! trust me, heavy fine and then possible jail time would follow

First of all, don't hijack threads. Second, what are you offering? Third, what are you asking for?
