Maybe you can help me understand what isn't making sense.

"Chidori is a Text-To-Speech video content creation tool designed to generate videos in under just 4 clicks."

In summary, the application can rapidly generate Text-To-Speech videos similar to these:

<https://www.tiktok.com/@askreddits/video/7157385609709915398>

https://www.tiktok.com/@reddit_storiess12/video/7162287672042556678

<https://www.tiktok.com/@godlyredditor/video/7148193025804471557>
https://www.tiktok.com/@reddit.stories_vid/video/7174254779747536170

This is undoubtedly an untapped content niche which I've automated with Chidori.

The application is fully integrated with Reddit posts.

Maybe watch some of the youtube videos below the thread to get a better understanding and feel free to reach out if you have any questions whatsoever.

I received a trial copy of the software for review and below is my review:

Product/Guide:

You will receive a sophisticated software along with an extensive guide on how to install and use it effectively. The document is very detailed filled with screenshots if there is any issue in understanding on how the software works.

What it is?

This is a software which will fetch stories/texts/jokes etc. from subreddits directly and put them on to stock videos or custom videos. Have you ever seen those viral videos with stories on them? this is it. Find examples I made within minutes in last section of review to see what this can do.

Quality:

This is a very neatly built application which works on multi platforms and moreover, most of the stuff of rendering etc. is handled on cloud so you really do not need a resourceful PC/hardware. Processing is also very fast. Once set up, it takes hardly 2-3 minutes for a video to output. Also has many options to choose fonts, colors etc. so you can finetune the settings.

Examples:

I used AITA subreddit to get a couple of stories and put up couple of pexels videos as stock and below are the results:

Videos [\(Click to View\)](#)[Video: <https://youtu.be/gtxPHrBJzag>]

2nd video:

<https://youtu.be/Uu7AtqcETn0>

It literally took me 5 minutes to build these 2 videos.

If you are in to these type of webpage building or making viral tiktoks etc. this will be pretty useful.

Overall a very solid product really. 9/10 from me.

Thank you again [Ramsey](#) for reaching out. Good luck with sales!

Absolutely. The background video can be whatever you want it to be. I've also included a robust, uncapped and highly available storage solution for purchasers which you can use to store your background videos - Free of charge.

I just used a Minecraft one in the demo because it's popular. Everything is configurable.

Yes absolutely. I think once I've hit a reasonable amount of sales I'll follow through with that update.

I'll be implementing Youtube Shorts and TikTok uploaders.

I'm also looking to implement the entire Google Font library into Chidori.

The price will most likely go up a little after these updates.

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,

It's definitely an untapped way of generating some great traffic to your account(s). Think of all niches out there.

From the creepypasta/nosleep niches to the
confessions niches to the
adult niches to all of the
controversial niches to all of the
life hack niches to the
ask me anything/AITA niches.

...

The possibilities are actually endless.

Over and above all of this, leveraging ChatGPT ensures that you never run out of content.

Additionally, no one is stopping you from creating 10 different accounts and churning out content everyday.

I definitely think this is worth buying.

This tool is certainly something you should be proud of. I'm not sure why people are not understanding what the tool does. Just watch the Youtube Video, it has amazing potential.

Some feedback.

The ability to add music would have had me sold on this.

If you could change the voice AI using like VoiceAI to copy people etc, it would be worth even more IMO. This is truly gold.

I am going to watch this post for these features just incase and if they become a reality at least 1 I am buying

Thanks for the kind words. These items are 100% on the road map. Just one more sale and I'm writing the implementation.

I will create a trello board in the future perhaps, but these are the next 3 features to be implemented after the next sale:

- 1) In App Tiktok/YT shorts uploader.
- 2) Additional voices. This includes natural voices.
- 3) Option to add a background track with configurable volume.

The price as you'd imagine will go up after the update. This would accommodate for the feature updates and additional expenses incurred from natural voices. Current customers won't have to pay a cent more. I'd recommend buying before these 3 features are released.

- Hey buddy

Thanks for reaching out. Here are some quick answers.

1) Not as yet. Background music will be released at some point. Was just battling with my health for the past few weeks. Doing much better now.

2) You can find your own. BUT as of recently, I've created a list of 40 high converting copyright free backgrounds which you'll love. I've alleviated a lot of the heavy lifting for you. The bottom line is that it's configurable and up to you as to whether you want to use your own or some of my presets.

Also another point here is that I offer a highly available and robust cloud storage solution so that you don't have to stress about finding some place to upload videos to.

3) You see the possibility of this is so unlikely. The chances of someone choosing the exact same niche then exact same text then the exact same background then the exact same voice then the exact same font is unbelievably low. Even if this were to happen you may not get copyright struck depending on the platform. Not even worth while considering IMO.

Another point here is that the text is 100% configurable. You're not limited to just reddit btw.

Sounds awesome! Glad you do. Yes, I currently have a small Discord server with my customers.

Right now, here's what's been added

- 1) GPT integration
- 2) Background Audio
- 3) Email notifications

I really want to add new voice providers, but they're so pricey. 11 labs/Resemble would be great, but it's just not feasible at the moment.

Yes ofcourse! You will gain access to both the desktop and the webapp. I do not intend on closing this project at any point. I'm extremely passionate about this project. I might however need to stop lifetime deals once the webapp is out (won't be sustainable for me in the long run).

"Chidori" is an electrifying technique used in the Naruto series, famously employed by Sasuke Uchiha. With its swift movements and piercing power, it's a signature move that signifies strength and determination. The crackling sound of lightning accompanies its execution, adding to its intensity. This comment reflects the awe and admiration fans feel for this iconic jutsu, showcasing its impact on the series and the lasting impression it leaves on viewers. [warn]

Curious to know what's been added to this project since the initial thread, do you happen to have a full feature list you could send my way?

Looking forward to hearing from you!

Hey man yes ofcourse. Will send you a message. Generally speaking though, I've added GPT integration along with custom audio and background presets. You can now also upload your own as you like. I've also added in Integration with Google Fonts so you can basically search a huge db of text fonts.

Yes it is ? The desktop app has also been migrated to a functional web application.

Apologies, I was away last month. Didn't get to resolve some of my open contracts. I am back now.

Incomprehensible - July 20, 2026, 8:29 pm

can't get to the website anymore. Pretty sure OP doesn't operate anymore

Hey buddy, I have been a bit inactive for most of this year honestly. Apologies for the poor responses. I haven't been giving this project too much attention since I started my consultancy. I am going to unlock your account asap and give you what you need. I have your discord. I will likely be reviving this project and maintaining it a bit better in the weeks to come. Sorry again for the hassle. I know you've asked a few times now and this is not the precedent I'd like to set for my products.
