Thread: [Google tips and tricks](#)

Clumsy - January 10, 2023, 3:17 pm

1. Pulling back deleted photos from google photos

First we are going to login to our google photos account with saved pictures from any device such as android.

Next we are going to go to the following url <https://www.get.google.com/albumarchive> this is the old trash bin for Picasa which was the old version of google photos before we had the marketplace we have today.

Now once here we go to archived album and we see all our old deleted photos enjoy.

2. Now we are going to google dork but with a twist.

First we go to https://www.google.com/advanced_search and we can do an in-depth search for all our InfoSec needs.

Now we are going to use this same search but for image reverse engineering https://www.google.com/advanced_image_search this allows us to use the ui properly when doing conductive research.

Hope you guys enjoy this be sure to follow me on [Twitter](#)
