Hello.

I need some done work in Shopify and I would prefer to see it done today. It is minor tasks that I do not have the time to work with right now.

Two things must be done.

Fix the position of a input box on the cart page, this could be done with basic CSS. The input box is from an app that allows customers to pick delivery dates, and in the app settings you can add the CSS directly.

Add informations to the delivery note / invoice.

At this moment, customers receive both a order note and a delivery note, my client is tired of printing two pieces of paper and other stuff, because of that he would like all of the info's to be put on one page. I know this sounds really weird and complicated, but it's super hard to explain and it, and much easier to show it.

Reach out to me if you have the skills to finish the two tasks above, we can discuss your payment and so on.

The job needs to be done TODAY.

Do not waste my time, if you do not have the skills to do it.

Thanks!

Send me some more information about the second request. I could probably get that one done for you quickly for free :)
