Thread: [Programmer to Auth on Google's oauth via requests \[\\$100\]](#)

\$neaky - January 27, 2023, 12:50 pm

Looking for: How to get Google JWT for a specific service via logging in with their oauth.

It needs to be done through HTTP/S requests only, no selenium.

For more information feel free to PM or DM me and I'll gladly inform you a little bit more about the task.

It needs to be done through HTTP/S requests only, no selenium.

Can you please elaborate this ? Does this needs to be done in server side language ? Like PHP, NodeJS or anything like that from which browser will be redirected and user will be able to login and fetch token ?

Let me know if that's the case, I might be able to help. Thanks
