Thread: [Backend dev](#)

Lamelo - February 2, 2023, 9:39 pm

Looking for a backend dev that can simply help me implement MONGODB with nextJS and the current model I have now. I have bought <https://www.devias.io> admin dashboard, and just want to implement auth and database reading with it.

Not looking to pay too much just want the basic auth setup. It's already setup in the FILES just wanting to know how to configure it properly based on the devias guides

@Lamelo

That's something i could look i'm a JS Developer.
Can you pm your discord so we can take a look ?

I can do the job first.
