Thread: [WP Pwner - Basic tools to PWN a WordPress](#)

?Alexander - February 11, 2023, 5:30 am

You guys ain't worth this

If a mod sees this, delete it

73SLA - February 11, 2023, 6:59 am

What do you want to say?

You created a virtual server on a virtual machine... where you installed wordpress. Then you created a shell-based code that injects wp-admin and creates an account with username and password. You see, this username must not be indexed by wordpress and the server. He must act as a spy who sneaks under a username on the forum and uses his access data on the forum: the decrypted username and password.

Now test this code on a real site!

And see what happens!

Interesting!

what the fuck you on about? half of your post doesn't make any sense.

i tested it on a real wordpress and it worked. i don't get your point.

73SLA - February 11, 2023, 7:28 am

Then post how you tested this on a real site not on a virtual machine!!

i uploaded the plugin just as i did on my vm?

please just gtfo if u dont know shit

i made the plugin bc i gained access to an admin wp account but needed to dump the db, so i decided to create the plugin and added some other features

73SLA - February 11, 2023, 7:34 am

You dont get it! Im sriry 4 u!

later edit : the code is prohibited and infected with malware! be careful!
