Thread: [Bybass BIOS lock](#)

Huntingcoffee - February 11, 2023, 10:20 am

My friend forgot his BIOS lock password and was hoping i could help him

Ive been unable to bybass it so far

I can access windows but im trying to change the OS not just reset it

Its a HP Probook 450 G8 Notebook PC

BIOS is T70 ver.01.06.03 08/26/2021

Thank you in advance?

webdev77 - February 11, 2023, 11:38 am

I don't know if there is a bypass readily available for this model or not, but pre-programmed chips are \$35 and require moderate soldering skills to remove the old one and install the fresh chip. A hardware bypass will always work if you can't find a software method.

[LINK REMOVED]

None of which work sofar

The current plan is to go the hardware route

thePoseidon - February 12, 2023, 10:11 pm

Just take the BIOS battery off and put it back.

I haven't had success with this. The only thing that happened with the above method is that after a few tries, the laptop I was trying to change the OS on would no longer POST.

Nukengon - February 13, 2023, 9:24 pm

It can't be accomplished.

the404-1 - February 14, 2023, 3:02 pm

thanks for this information

moosa666 - February 19, 2023, 12:49 pm

new machines that are being made now this cannot be done as the security is saved on the bios chip as the first response claims replacing the bios chip is the only option if you cannot do it bring it to a repair shop
