Thread: [Bug Detected \(Username History\)](#)

**Game** - February 12, 2023, 4:31 pm

So I was sent a URL to look at someone's username history and realised I was viewing the page through the discord browser and was not signed in.

To test, open a new private browsing window and paste the following link into the web address bar.

Using Extras>Username History (<https://hackforums.net/uhsearch.php>) I am greeted with "This is an Ub3r only feature." as I am L33T but I can still obtain the results using the link below.

[https://hackforums.net/misc.php?action=username\\_history&uhuid=3539763](https://hackforums.net/misc.php?action=username_history&uhuid=3539763) Used my own UID as an example.

Tl;dr - Username history(Ub3r only feature) can be viewed by anyone, without the need to be registered/logged in. Just obtain UID of target, then you can see their username history.

Nice find. I'm sure once Omni sees this, it'll be fixed.

Just doing what I can to keep the community safe.

**Cooligan** - February 13, 2023, 12:11 am

Can confirm this, just tested it myself:

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

**Cooligan** - February 13, 2023, 6:17 am

(Feb 13, 2023 04:54 AM)m0hx Wrote: [\[CITE\]](#) U can also see who posted in a thread without logging in:

<https://hackforums.net/misc.php?action=whoposted&tid=6233162>

replace tid=ThreadID for any thread.

If you open this page while logged in you get this lol:

Spoiler [\(Click to View\)](#)

edit: Turns out it gives you the same page whether you're logged in or not:

(Feb 13, 2023 07:26 AM)m0hx Wrote: [\[CITE\]](#) nice. Wait I'll post some more.. I'll update my post :3 edit: updated!

Oh damn! Well shit this is gonna be fun lmao ?

Nah I'm genuinely curious though what I'm able to find, will definitely report it back here as well. I love snooping for little fixes like this on HF, always have.

I remember when we used to have a bunch of little easter eggs onsite, a bunch have since been deleted though.

(Feb 13, 2023 04:54 AM)m0hx Wrote: [\[CITE\]](#) 1. Who Posted - U can also see who posted in a thread without logging in:

replace tid=ThreadID for any thread.

<https://hackforums.net/misc.php?action=whoposted&tid=6233162>

2. Get Users - Search for users in the query (just like when u search for user to invite/convo somewhere)

[https://hackforums.net/xmlhttp.php?action=get\\_users&query=m0h](https://hackforums.net/xmlhttp.php?action=get_users&query=m0h)

3. HF Complex Password Check - I think its used when u signup.

Good Password:

[https://hackforums.net/xmlhttp.php?action=complex\\_password&password=myHFPassword123](https://hackforums.net/xmlhttp.php?action=complex_password&password=myHFPassword123)

Bad Password: [https://hackforums.net/xmlhttp.php?action=complex\\_password&password=qwerty](https://hackforums.net/xmlhttp.php?action=complex_password&password=qwerty)

4. Username Availability - Check if the username is available to register/change to.  
- First you need to find your "Post\_Key" here are the steps (even when logged out, u can get Post\_key as a guest when you load HF, each time you close ur browser or close/open new incognito window ull have new Post\_Key to use.

Here's how to get the Post\_Key value:

1. Open new HF page (either logged in or incognito)
2. Wait for it to verify ur human/captcha thingy.
3. Right-Click anywhere -> View Page Source -> and search for: Post\_Key

for example this is my Post\_Key value as show in the picture above:  
xxxxxxc226a87610d675e69e201969bd

Now you can paste the Post\_Key value in this URL and check for username availability:

POSTKEY = ur post key.

USERNAME = username to check if available or not.

Code

`https://hackforums.net/xmlhttp.php?action=username_availability&my_post_key=POSTKEY&username=USERNAME`

[https://hackforums.net/xmlhttp.php?action=username\\_availability&my\\_post\\_key=xxxxxxc226a87610d675e69e201969bd&username=m0hx](https://hackforums.net/xmlhttp.php?action=username_availability&my_post_key=xxxxxxc226a87610d675e69e201969bd&username=m0hx)

returns: "m0hx is already registered by another member" :D

Good stuff, was just about to add these to the thread but you already did.

There's actually quite a few functions accessible outside of the user scope.

**Omniscient** - February 13, 2023, 11:50 am

None of these are a concern.

Username History search is not the same as viewing a users specific username history.

The rest are just odd pages which don't require a login to get data. All harmless.

Thank you for confirming. I wasn't sure so thought to make you aware.
