Thread: [Send 50k Emails To Inbox](#)

Papito - February 14, 2023, 9:35 am

Please, message me what you have got. These are legit customers I just need to send them email to inbox as my domain is flagged as spam and it's hard to get a sendgrid or similar account.

i can do this for you i m prettyvery sure

Pressa Armani - February 27, 2023, 4:16 pm

Hello everyone on this Thread, i am also looking for someone to help me with mass mailing, right now i have no problem using php mailers and smtps but my template that i would like to send only reaches spam

puremetal - June 1, 2023, 2:32 am
(Mar 1, 2023 10:21 AM)Dyne Wrote: [\[CITE\]](#) Then your template was flagged.
You can use SMTP or letter encryption methods for this.
"encryption" meaning the html is visible to the public eye but also includes invisible code such as;

Code T????
O???????
_??????.
Ē?????
M???????
A???????
I???????
L????
}?????
, ?????

Y?????
o????
u????
r?????
- ????
p?????
a?????
c???
k????
a???????
g???

[illegible]

This will place microscopic font in between your filter words.
Use variables like [to_user] [datetime] [unsubscribe] [mailto:] and so on. This will add both a sense of legitimacy and personalization to your letter hitting the inbox.

If your letter was previously used in a spam campaign, or the html builder for example, your letter will be immediately junked because of this regardless which SMTP you use.

Best of luck.

Do you have a tool for this?

ThrowAwayResearch123 - June 2, 2023, 1:30 pm

I've received spam emails before that were delivered to my inbox for Camp L lawsuits and stuff like that. Came from a random email like dsjhdjyysaijb@jsdhj.co or sajkdghsiajhdjksa@gmail.com. How would I do this exact thing and send to hundreds of thousands to millions of emails? Theres definitely a way, just need to get this post in front of the right person
