Thread: [Monero mining](#)

jane - February 22, 2023, 5:26 pm

Is there a website where it listed most of the CPU's and how much XMR they generate or calculator something?

Tightarse - February 23, 2023, 2:39 am

Nicehash have a pretty easy to use calculator.

POLLUX - February 24, 2023, 6:07 pm

The question is do you need that because you want to start silent mining or because you want to mine with a real mining setup?

These calculators are useless for silent mining, because your bots go online/offline, the miner can't use all PC resources, not all bots are mining 24/7 etc.

I really want to try real mining setup, no idea yet about silent mining but I will look into it.

Yes, there are several websites that provide CPU mining profitability calculators for Monero (XMR) based on the hash rate of the CPU and the current difficulty of the Monero network. Here are a few examples:

1.WhatToMine: This website allows you to select your CPU model and adjust the hash rate to estimate the profitability of mining Monero with that CPU. It also provides information on the current network hashrate, block reward, and difficulty.

2.CryptoCompare: This website provides a Monero mining calculator that allows you to input your CPU's hashrate and power consumption to estimate your daily, weekly, and monthly earnings from mining XMR.

3.CoinCalculators: This website offers a Monero mining calculator that takes into account your CPU's hash rate, power consumption, and electricity cost to estimate your profitability.

It's worth noting that CPU mining for Monero has become less profitable over time as the network difficulty has increased and ASIC mining has become more common. In general, it's more cost-effective to mine Monero with a GPU or ASIC miner.

Check xmrig they have large pools with all the cryptos for different hardwares!
