Thread: [gmod server hack attack](#)

SIM-5234130 - February 27, 2023, 3:02 pm

I am trying to get into a gmod server to give random admin access. there's a number of ports but I can't seem to get a foothold. the game server port: 27015

MySQL: 3306 and http: 443 cant forget ssh, that's open too. What must I do to gain more of a foothold? it's like a mountain I keep falling off of.

if possible send me a dm, and let's collab?

DramaKing - February 28, 2023, 12:44 pm

You might be able to bruteforce the database or SSH credentials, but I can't say anything else based on those ports.

funny enough i havent thought of that, hydra yea?

DramaKing - February 28, 2023, 8:02 pm

THC-Hydra is one option.

i didn't know of that, ill take a look into it

Tugawasi - March 17, 2023, 10:12 am

Really the only way of doing this is bruteforcing or social engineering.
