Thread: [Crypto Futures CUSTOM Coded Trading bots | AI Trained Optimized Strategies.](#)

bambeero - March 4, 2023, 8:52 am

I have been developing a framework that produces highly optimized trading bots & Strategy.

Market maker: Bot is a pure maker. It never takes orders, only makes them.

DCA: Dollar Cost Averaging. It will make up to several reentries to achieve better average entry price.

Scalping: It will close positions at small markups

The bot itself is a python based script that executes buys and sells based on Optimized Configs.

Each config/Strategy will be tested and optimized based on your pair's 12 months historical order book data.

You choose your risk factor, LOW - MINIMUM - HIGH based on that we will optimize leverage and initial/re-entry order size accordingly.

Our low risk bot is on x3 Leverage and can make up to 18% in a stable monthly basis income while the highest risk bot has made up to 720% in a single month trading LTC on 12x leverage.

Exchanges supported: Binance, Bybit, Bitget

What you get:

- Python script to execute Buy/Sell orders
- An optimized strategy config file for each Coin pair you choose. ETHUSDT/IOSTUSDT etc

The bot should be kept running 24/7 so a vps or a cloud instance is preferable.

Pricing: 200\$ per Trading pair, choose your trading pair with more volatility for better earnings.
First copy only will be 100\$
