Thread: [Dip's Bottom Predictions?](#)

Aeowulf - March 9, 2023, 6:50 pm

Now that the crypto market seems to be responding to the Fed, where do you think the current dip's bottom will be?

Millionaires and Billionaires may be made for those that can predict close to correctly, and actually put their money in at that point.

So where are y'all betting?

shreder - March 9, 2023, 6:55 pm

No need to predict, I made a killing last dip you simply just DCA. Every leg down I just doubled or quadrupled the amount I bought. I also bought every flash dip as well.

This is the best way for pretty much any investing. There are always some that manage to time the market (even though the majority are pure luck or actually get it wrong).

Don't try to pick bottoms, you'll get smelly fingers.

I just short on the way down while buying spot at key support zones.

Longs are being liquidated like mad, this is fantastic.

Your advice can be dangerous if not treated with intelligence. For example, if one were to DCA in a shitcoin, chances are, they will continue to see dips and watch all their savings go. In addition, one should only spend that which one can go about missing or without endangering their way of life.

I can picture some lunatic reading that and thinking now is the time to quadruple their investment in LUNA.

Well there was really no advice beyond not predicting, it's just an account of what I do.

But I'm sure, nothing I can do to help them through that.

Sell in may and walk away.

We have seen this in crypto many times now, and i think it started earlier now.

I say 15 k at the beginninbg of the summer and maybe even lower during the summer.

Then in like August- september it will start to climb slowly again and we go for at least 50 k in december 2023.

I dont see anything that would make the price go up a lot in the near months.

To much problems with inflation and Russia/ukraine.

Noble - March 10, 2023, 7:09 am

Prove what point exactly? No one really knows 100% the bottom of a downtrend.

Yeah, no timeframe. Guys, it's hard to predict the market but you are out of your minds if you think we'll go to these low levels.

EDIT: I'll take an UBER upgrade from Pablo as a compensation!

It has to retest those levels, you think the market going to head straight up? Lol.

What would we need to re-test these? When you see a positive CPI, you will probably see a steady hike rate as well, and the war might be resolved soon. How are we going to test \$15k levels again? We'd need a nuclear war, or some zombie apocalypse. FTX bubble was the last blow to the crypto world. ?
