i have a [BRAND NAME REMOVED] account that is 2 days aged + verified, today i was swiping and everything was fine UNTIL i added "snap:username" in my bio and now not a single match.

If it was that easy, everyone would get traffic using [BRAND NAME REMOVED].

Either don't post anything in bio and manually send IG/Snap (that'll be too time consuming and won't work for too long), or find a workaround that'll help you post username in bio without getting shadowbanned.
