Thread: [\[2023\] E-WHORING MASTERY FROM ZERO | A BEGINNER'S PATH TO SUSTAINABLE SUCCESS](#)

affairsector - March 17, 2023, 7:17 pm

What is the purpose of this thread?

I am making this thread to avoid frustration when I see the same trivial questions so that I have a central point I can refer lazy beginners to. It will teach you how you can get started e-Whoring and add more revenue streams to your income. I will not spoonfeed you a basic method like others have done. I will teach you core skills to succeed in making money online, or using recent popular terminology, "escape the matrix".

I hate repeating myself. I have seen far too many low quality threads in this section during the few days I have used it. It honestly baffles my mind how misdirected the efforts of some of you are. I honestly pity you, it takes more effort, clicks and keypresses to create a thread and ask a basic question than to use the search and find an answer.

Feel free to ask questions below or contact me privately for assistance. I will not reply to anything that has been answered in this thread. I do not use Telegram, Discord or any external platform with the exception of Session. I have put my Session ID (only external platform I use for communications) for 10 bytes if you want quicker access to me for queries, but there is no extra information in there. It is all provided for free in this thread.

Everything you need to succeed is in this section and/or discoverable through Google. I have never paid for any methods nor mentoring. I learnt of this industry and started only 3 days ago but I have already profited ~\$925. I used ~1 day to research and configure everything, and started operations 2 days ago with a grand total investment of \$0. I will not compromise my OPSEC to share these earnings though, you can believe me if you want or think I am lying; quite frankly I don't care, your opinion is insignificant to me. I don't have anything to sell you, and I will not even ask for bytes for this. You LQ posters just piss me off, reading your badly typed nonsense frustrates me. If you are like me and enjoy lurking and helping the occasional user, you can refer them to this thread.

While I may be a newbie with less than a week of experience in this, I certainly am not of the same caliber as the people this is targeting. I could very easily sell this as an e-Book or mentoring for several hundreds but I do not need your money. I make enough on my own. I will help you bridge the gap to success and stop poisoning this excellent forum section with repulsive mindsets. If you are more skilled, or feel something is incorrect, feel free to reply and dispute it. We are all learning, I am not the best in the industry either. If you do not understand something, Google it, until you understand the entire wall of text you just read.

What is required for success?

A brain; the ability to process and retain basic information.

A device; you can start on a Desktop, Laptop or Mobile Device with any operating system with any specifications as long as it can run a browser.

An Internet connection.

Your time; the quantity will depend on your current digital skillset. It should take you <1 hour to ingest this thread and understand it, ~1-12h to configure your business model and only a few hours of operation per day to generate income.

What will be gained from reading this thread?

A modern understanding of this business model and industry

An effective mindset for success with digital monetization methods

Resources to improve your digital marketing skillset

Resources to improve your sales skillset

An effective methodology to track your operations

An effective methodology to build your own methods and avoid dependency on third-parties

An effective methodology to scale

Building Related Revenue Streams

Following Stages and Scaling

1. What is e-Whoring?

Put simply, it is the process of selling digital and/or physical products and services in the adult entertainment industry to Internet users in order to fulfill their burning romantic and sexual desires.

The digital products/services range from adult content media packages, in the form of image/video batches that you package together for sale, to sexting or content access subscription services which you provide to your customers in exchange for monetary compensation.

The physical products range from underwear shipped directly to their residences, to meet-ups at negotiated locations.

2. The History of e-Whoring

While I may not have been there at the inception of this industry, I have certainly lurked enough and done sufficient reconnaissance to have a good understanding of its origins.

The market segment of sexual products/services has existed since the dawn of humanity, with sexual desire being driven by the hormone called testosterone. This is inherently higher in males, which is why majority of the products/services in the sexual marketplace are targeted towards men. However, this same hormone is also present in women; meaning they can also be targeted as a potential market segment, although the likelihood of a successful conversion is lower given that women tend to drown in sexual attention from men and therefore their demand for such value propositions is significantly lower in frequency.

These products/services were initially fulfilled by escorts and drawn erotic content. With the development of the telephone and printing press the next boom was in audio sexual fantasies and printed erotic content allowing for mass distribution without direct human interaction required, provided access to a storefront if it was legal in the jurisdiction a prospective customer found themselves in. Nonetheless, this still required a degree of imagination due to the lack of interactivity or continuous visualization from such value propositions.

With the rise of technology, this market also adapted to supply the demand that was now accessible from any geographical location provided a connection to the Internet. Never before had humans been capable of fulfilling their sexual desires at such a scale and such a low cost, previously, a human desperate for sexual/romantic attention had to physically source and pay for another human to fulfill these desires that they were incapable of achieving on their own by appearing attractive enough to others. These activities were frequently frowned upon in society, however, the Internet allowed these desperate humans to achieve these novel results from the comfort of their home or any location they desired; even if such products/services were considered illegal in their jurisdiction due to the lack of control most governments had over this communication

medium.

Initially, this was done over basic chatrooms over platforms such as BBS, IRC and AOL. This communication method, similar to phone sex/audio sexual fantasies required the customer to leverage their imagination to achieve their sexual desires and was exploited by both the people who fulfilled this demand honestly, as well as cunning individuals who saw an opportunity to generate income by impersonating the gender that the ideal customer profiles were willing to compensate financially.

With the rise of media on the Internet, this was gradually replaced by adult entertainment sites in which users could suddenly access hundred of thousands to millions of video files in order to view nudity and sexual acts in a multitude of variations which they could previously only imagine. Certain individuals saw this opportunity and used it to grow this industry to multiple billions by managing user-generated content on platforms they operated (such as PornHub for example).

One might think this eliminated the demand for chat room sexual fantasies (sexting), audio sexual fantasies (phone sex) and printed erotic content (magazines) entirely, but this line of thinking is flawed. Another bias that impacts humans is choice overload, so individuals operating such revenue schemes were still able to generate profit off their methods due to the fact that the core value proposition in this model is the fulfillment of the customers sexual desires, and now, with a plethora of content immediately available they must filter through it to source what appeals to them - as well as - the complete lack of interaction that occurs when observing such content. What they desire is not only the visual aspect of such scenarios, but rather the rapport and emotional rollercoaster that is obtained by engaging in risky behavior in order to get a reward of sexual gratification.

This allowed other cunning individuals to develop what are referred to as Virtual Cam Whores (VCWs), in order to provide an interactive medium to the market over video communication platforms such as MSN/Windows Live Messenger and Skype to pretend to be the desired sexual partner over live calls in exchange for monetary compensation. These were tools that allowed operators to let their webcams stream a specific video on command during a call, to convince the customer that they were the desired partner fulfilling the exact (or near exact) actions they wanted to observe in real-time. These buyers were often sourced from chatrooms, dating websites or social media such as MySpace, Omegle and Facebook.

That brings us to the current digital sexual marketplace, in which social media platforms (such as Facebook, Twitter, Instagram, Twitter and Reddit), dating platforms (such as [BRAND NAME REMOVED], Bumble, [BRAND NAME REMOVED] and Match), escort platforms (such as Bedpage and Tryst), sugar daddy platforms (such as Secret Benefits and Established Men) and various others are used to source buyers to sell adult content in combination with rapport/interactivity over instant messaging platforms (such as Kik, Snapchat, Whatsapp and Telegram) which allow operators to trivially falsify what appear to be images/videos taken "live" but exchanged asynchronously with buyers, and scale the earnings of the operators exponentially since it was no longer tied directly to their time and a single operator could handle several leads concurrently.

Operators with digital skills such as software engineering and digital marketing quickly saw an opportunity to exploit this market by spamming this high-demand content across the Internet by making use of their knowledge, skills and abilities such as programming and SEO optimization/poisoning to drive traffic in automated manners towards their e-Whoring ventures. This incentivized the traffic (dating/social media/escort/sugar daddy) platforms that were being abused to place security mechanisms such as photo verifications and anti-bot prevention algorithms to thwart the frequency of such profiles in order to maintain a high quality service for their users and maintain the happiness of their stakeholders by upholding profits and avoiding public reputation/relations disasters. This however, did not stop the most conniving of users who managed to understand these

mechanisms and bypass them to continue their activities, although at a stunted/slowed rate due to the continuous obstacles placed by the platforms.

As this digital sexual marketplace continued to grow, even more conniving and enterprising individuals saw an opportunity to create content subscription platforms such as OnlyFans and Fanvue for these creators to easily and efficiently generate this content and market it at scale without concern for payment processing and content management with no upfront cost; only their platform commission. This allowed such businesses to grow to billions in revenue for the platforms and millions in revenue for the creators who would previously be incapable of such quantities due to the logistics of managing all the business domains.

3. The Current State of e-Whoring

As mentioned in the previous chapter, the current state of e-Whoring consists of generating "adult media content packages", commonly referred to as e-Whore packs (either by sourcing publicly available leaked content from content subscription platforms such as OnlyFans) or hiring models willing to produce this content for a fee or a commission.

Once this content has been sourced, operators can either create their own payment processing profiles (such as PayPal, Stripe, Venmo and Cash App) or use a platform which will process payments for them (such as OnlyFans, Fanvue, Selly and Rocketr).

The traffic sources have not changed for the previous decades, however, the difficulty in maintaining long-term profiles on these platforms has only become more complex as this industry becomes more saturated due to the low barrier to entry and high profitability. This is why you can discover that methods to maintain these accounts can easily cost several hundreds of dollars for operators, typically for sale by more experienced operators who engaged in trial-and-error to discover the sweet spots of the specific platforms and algorithms that they focus on to drive traffic towards their storefronts where they manage and distribute their marketing content and value propositions, typically by use of instant messaging platforms (such as Kik, Snapchat, Whatsapp and Telegram) or a platform that will integrate it all for them at a commission (such as OnlyFans). Experienced operators also leverage the traffic which they can either not convert due to a lack of sufficient operators to handle the lead volume or a lack of skill in sale conversions, which they sell to less experienced operators who lack the skill to maintain traffic sources as an additional revenue stream.

Once customers have been obtained, these operators can up-sell the existing customer base with further value propositions to extract the maximum value out of each lead over their lifetime as a customer.

4. The Business Model

Now that you are familiar with what e-Whoring is, its history and origins as well as the current environment, we can discuss a potential business model that can be leveraged by operators interested in starting. The reconnaissance for our operations are complete, we are left with enumeration to better understand the vulnerabilities and areas we can exploit for monetary gain.

A [business model](#), as defined by [Wikipedia](#), describes how an organization creates, delivers, and

captures value, in economic, social, cultural or other contexts. The process of business model construction and modification is also called business model innovation and forms a part of business strategy.

I will make use of the business model canvas to describe a business model that could be used by an operator to generate income within the e-Whoring industry.

Using this and the knowledge we obtained from reconnaissance (by reading and ingesting everything in the e-Whoring communities and public e-Whoring and business literature we discovered through Internet search engines) we can understand the following:

Key Partners

Who are our Key Partners? Models

Instant Messaging Platforms

Social Media Platforms

Dating Platforms

Escort Platforms

Sugar Daddy Platforms

Adult Content Platforms

Who are our Key Suppliers? Models

Telecommunication companies for SIM Cards (Phone numbers + Bandwidth/Data to appear like a different user)

Proxy Providers (Internet Bandwidth/Data to appear like a different user)

Phone Verification Providers (such as TextVerified or DingTone to verify accounts on platforms and appear like a different user)

Traffic Vendors* (If you're willing to pay to get traffic faster initially)

Which Key Resources are we acquiring from our Partners? Content

On-Demand Verifications

Leads

Which Key Activities do Partners perform? On-Demand Content Creation

On-Demand Account Verifications

Lead Generation

Key Activities

What Key Activities do our value propositions require? Lead Generation (Traffic)

Content Package Creation

Content Upload

Sexting Sessions/Interactive Rapport/Girlfriend Experience

Our distribution channels? Instant Messaging Platforms (such as Snapchat, Kik, Instagram, Telegram, Whatsapp)

Content Subscription Platforms (such as OnlyFans, Fanvue, FeetFinder)

Customer relationships? Self-service (fully automated, they purchase directly from your payment link)

Dedicated personal assistance (build deeper connection and trust and lead to a sale)

Co-creation (build deeper connection and fulfill customized requests)

Read more on customer relationship types [here](#).

Revenue Streams? Subscribers (access to content on a recurring basis)

Media Sales (purchase of a specific content batch of media files [images/videos])

Rapport Sales (purchase of an interactive session in which they feel unique and special, having an interaction with a girl [Girlfriend Experience])

Dick Ratings (purchase of an arbitrary rating to boost their ego/kinks)

Key Resources

What Key Resources do our value propositions require? Adult Content

Adult Chatters

Our distribution channels? Instant Messaging Platforms (such as Snapchat, Kik, Instagram, Telegram, Whatsapp to interact with Models and Chatters)

Customer relationships? Dedicated personal assistance

Revenue streams? Salary

Commission-based Earnings (25-40%)

Value Propositions

What value do we deliver to the customer? Fulfillment of their sexual desires

Accomplishing scenarios they cannot perform in their day-to-day lifestyle

Which one of our customers' problems are we helping to solve? Building rapport and feeling desired by someone they are attracted to, when the typical scenario is that they are undesired due to their lack of attraction

Providing attention when they are typically ignored

What bundles of products and services are we offering to each segment? Adult Content Subscription Access

Pre-made Adult Content Packages

Custom Adult Content Packages

Scenario-building/Girlfriend Experience

Sexting Sessions

What customer needs are we satisfying? Inherent need for sexual activity when they are incapable of achieving it physically

What is the minimum viable product? Adult Content Subscription Access

Pre-made Adult Content Packages

Cost Structure

What are the most important costs inherent to our business model? Maintaining Traffic Sources

Maintaining 14-21 days worth of content which can be recycled

What key resources are most expensive? Models (Content Creators)

Proxy Providers

Which key activities are most expensive? Lead Generation (Traffic)

Content Creation

Revenue Streams

For what value are our customers really willing to pay? Sexual desires/attention

Interactive rapport of their fantasies

For what do they currently pay? Access to Adult Content / Dating Platforms

What are our pricing tactics? Undercut/Match other e-Whores in the same traffic sources

Customer Relationships

How do we get, keep and grow customers? Re-direct leads generated from the traffic sources to Instant Messaging Channels

Build rapport and trust with leads in a 6-12 step process then pitch them for a sale

Store customer details in a third-party location in the event of account termination

Up-sell customers based on the rapport built

How costly are they? Run your own data statistics and monitor your costs for this

Channels

Use the Business Canvas and updated this based on your data.

Customer Segments

For whom are we creating value? Simps and lonely individuals who cannot physically achieve their desires

Who are our most important customers? Those with specific niches, who have trouble even sourcing their content in the vast sea of adult entertainment

What are the customer archetypes? Depends on who you decide to target (for example; feet,

findom, dom/sub etc.)

5. The Legality of e-Whoring

This depends completely in the jurisdiction you are currently located within.

In majority of jurisdictions, the usage of another person's (legal entity or natural person/human) [intellectual property](#) for monetary gain without their consent/explicit permission is considered [Intellectual Property Infringement](#), or more specifically for media content would be considered [Copyright Infringement](#). This is the case in the majority of jurisdictions, including but not limited to the United States, United Kingdom, Canada, Australia, France, Spain, Germany and various others. Always ensure you consult a professional in your local jurisdiction to be fully compliant with the law.

That being said, the likelihood of facing legal consequences is minimal if the creator does not:

1. Gain awareness of the unauthorized usage of their Intellectual Property
2. Discover the infringer's local jurisdiction
3. Expend some of their finances to take legal action against the infringer in a jurisdiction which would accept such a claim

This leads to most cases of Intellectual Property infringement being handled by the platform it occurs on rather than a court of law, and therefore it rarely results in legal consequences for the infringer and more commonly means that the accounts they were operating get terminated instead once it has been reported to the platform.

However, Intellectual Property can also be sold or licensed to other individuals/legal entities with terms they agree upon by use of contract, meaning you can purchase and own the complete rights to all the content used by your e-Whoring venture to be fully compliant with the law in your local jurisdiction and ensure a fully legal status. It is important to ensure that there is a legal contract in place to avoid any issues long-term if the creator decides to not honor your agreement and screw you over.

The other aspect of e-Whoring is traffic and depends on the Terms of Service of the platform you are utilizing to drive traffic towards your storefront in order to gain sales.

If the platform explicitly prevents such activity, it is often not a criminal offense but rather a violation of contract which can result in a civil claim or a lawsuit. However, as with Intellectual Property infringement, the risk of it escalating to a legal issue tends to be low due to the legal costs incurred by both parties and will often result in access to the platform being terminated instead. This is because the platforms cannot feasibly pursue every case that violates their Terms of Service or it would be too costly and would cut into their profitability since they have to prove in court that they are certifiably receiving damages/losses due to your activity. However, if they could prove you had performed automation at scale, of which said behavior caused them to miss out on revenue or impacted the quality of their service and it was done in a manner that they could attribute to your venture, then you should be concerned of having to pay a settlement/fine if the verdict results against you in a court of law.

It is important that you do not break any laws and remain fully compliant, because anything else is bad for business even if the risk may be low. Remember that you are never truly anonymous on the Internet and that if they want you, they will find you.

The exact details of these criminal offenses and civil claims differ from jurisdiction to jurisdiction so

always consult with professionals if you are uncertain about the legal status in your jurisdiction; for example, in Saudi Arabia, pornography is illegal which means the core premise of this venture is entirely illegal if it were being operated from that jurisdiction, regardless of the ownership of the Intellectual Property and the compliance with the Terms of Service of the platforms used.

[/color]

6. Operational Security

A prospective operator is now aware of the intricacies of the industry, the business model that they intend to use and the legality of such an organization. That means the reconnaissance and enumeration phases have been completed and they are ready to take action and reach the exploitation phase. However, since you are performing these transactions over the Internet, it is important to remain secure regardless of the legal status of the operation. This is due to malicious actors who could attempt to steal your profits, credentials or thwart your operation for ideological purposes.

This is not exactly in scope of this tutorial but I will provide some basic recommendations. If you would like further information on this you can reply requesting for it and I will provide a separate thread on Operational Security or can discuss with you privately.

Credential Management

It is important that you secure all your credentials with strong passphrases, I would recommend that these passphrases be unique and the maximum length which the platform they belong to allows and consist of a randomized alphanumeric string containing both lower and upper case characters, numbers and symbols. This will help you protect against brute-forcing/dictionary attacks as well as credential stuffing if a separate platform/service you make use of is breached.

I would also recommend using a different username/email address per platform to avoid linking multiple profiles together in the event of a breach and to increase the difficulty of a threat actor performing credential stuffing attacks. You can make use of open-source services such as AnonAddy which you can self-host to do so.

All your credentials should be stored in an open-source encrypted password manager such as KeePassXC or Bitwarden. I would personally avoid paid services such as LastPass and self-host the server yourself if you would like the convenience of the cloud to access your passwords because they are a constant target for sophisticated actors and would receive far more attention than your own infrastructure as a smaller organization.

System Security

Prevention is always the best protection. It is important that you do not install unauthorized/random software on devices intended for your operations to prevent infection by malware. You should always operate in isolated environments such as virtual machines when available, and ensure that the minimum quantity of software is installed on the systems used for operations as having unnecessary software simply increases your attack surface.

In addition to this, you should ensure that your systems remain up-to-date and patched against the latest vulnerabilities.

Network Security

Operators should make use of tools such as VPNs or proxies to conceal their IP address information from possible attackers when engaging in operations. These can be self-created or paid services and ensure that you read through the Terms of Service and Privacy Policy of these tools to

verify that they do not store logs or sell your bandwidth/data to third-parties.

In addition to this, more sophisticated operations should make use of firewalls and other security tools to ensure that the traffic on the operation's network is monitored and controlled.

7. Building Content Packs

As we learned from the business model section, one of the key resources to success in this industry is the adult content.

The quality of this content will impact your conversion rate when interacting with traffic and therefore the quantity of sales you obtain. It is important to source and organize high quality content packs in order to get sales.

You can source and build content packs by searching for leaked content from content subscription platforms such as OnlyFans, using Internet search engines such as Google. However, as we learnt in the legality section of this thread; that classes as Intellectual Property Infringement, so if you must do it, it should be done with the intention of re-investing profits obtained to obtain your content packs legally which can be done by hiring models or paying them a commission of your sales.

Building Packs from Leaks

You can make use of techniques such as [Google Hacking](#), to use advanced parameters/operators built into Internet search engines such as Google in order to filter out unwanted results.

To find potential content that an e-Whoring operator could use to build packs, they could make use of a combination of their desired results and Google dorks. For example, an operator who has spent time in the communities will commonly see MEGA and Dropbox used to share e-Whore packs or leaks from platforms such as OnlyFans; therefore they could hypothetically use the following Google dorks to guide them towards sources which they may use to gather content to build their packs. Teaching Google dorks is out of scope for this guide but there is a plethora of information available on them in other sections of this forum and the Internet.

Quote:intext:onlyfans.leaks.mega (Source OnlyFans leaks using MEGA)

intext:onlyfans.leaks.dropbox (Source OnlyFans leaks with dropbox)

intext:onlyfans.leaks.ewhore (Source OnlyFans leaks for e-Whore packs)

intext:ewhore.packs (Source existing e-Whore packs)

intext:onlyfans.leaks.gay (Source OnlyFans leaks from Gay/Male creators)

intext:onlyfans.leaks.male (Source OnlyFans leaks from Gay/Male creators)

This can be used to find existing data for specific creators or similar, but the previous are good starting points to build your own packs or understand what you should expect from a model you hire to build you packs.

The higher quality the resolution in the packs, the higher the likelihood of conversion. Also, as we learnt from the business model section, there are specific customer/market segments you can target in the form of niches - if you can source/create content to appeal to these niches you will be able to

increase your conversion rate when engaging with such customer profiles.

The attractiveness of the person in the content will also highly impact the conversion rate of your traffic, it is preferably to avoid the extremes and get a mid-highly attractive person. This is because an unattractive person will be much harder to convert, as you are not appealing to the core of the business model which is fulfillment of their romantic/sexual desires; and for that very same reason, an extremely attractive person will have a harder time converting (albeit will definitely have higher conversions than unattractive people) due to the customers instantly writing it off as a fake account/unrealistic due to their self-image because you did not appeal to the fulfillment of their romantic/sexual desires realistically.

Building Packs from Models

This is the legal and compliant way to source your content packs and is how you should aim to obtain your content, at least once you have the capital to do so.

You should prepare a contract with the terms and details of your agreement, particularly concerning the ownership of the Intellectual Property that is created by them for the purposes of the venture, their compensation and expected contributions. You should always get professional legal help to ensure that this document is compliant and fully enforceable based on the jurisdiction that you will be operating and the jurisdiction that the model will be operating from.

I would recommend you either get the model on a fixed salary or a commission of future sales (25-40%) once you have communicated and made clear the intricacies of the business model and that it is not just the content creation that drives the revenue within this industry. Make sure you can provide the value and that you make clear that they will be incapable of generating as much revenue without your aid with driving traffic, branding, managing leads and up-selling previous customers (because it is true).

You can source these models from a few channels, including but not limited to, social media platforms (Twitter, Instagram, Facebook, Reddit etc), escort platforms, adult content platforms and other Internet segments. You should aim to find people who have already attempted to sell adult content on their own but did not gain much traction (possibly using techniques such as Google Hacking/dorking) since they will be far easier to convert than regular users who may have too much dignity to sell their own sexuality for monetary gain.

Models in lower income countries will be easier to convert due to the value of the returns being significantly more to them and harder living conditions in their day-to-day lives. If you can target people in lower income jobs as well you will be able to increase your conversion rate.

Expect to have a lot of models flaking and do not obsess on closing a specific model, if they are not interested then simply proceed onto the next model lead and attempt to close. You may close multiple models on the same day, or it may take weeks to find quality models. It will depend on your reconnaissance and sales skillset.

You can use AI tools such as ChatGPT, Jasper, Midjourney and others to speed up the process of branding yourself, copywriting and pitching these models. If you have a programming skillset, you can also leverage these skills to automate your outreach sourcing models and gain a consistent influx of model leads who you can attempt to partner with for your venture.

Expect to have the models be lazy and so ensure their contributions are well reflected in their contract. Focus on commission-based revenue agreements initially to gain more content with less capital investment, you can always re-negotiate or source different models afterwards and then re-target your existing customers. Remember, they need you more than you need them. The core to

any digital business is traffic.

8. Processing Payments

Now that you have sourced your main value propositions, you can focus on how you will accept payments for your sales.

This can be done using: Card Processing Platforms such as Stripe, Braintree, Square and others linked to your own website (which if you have programming skills you can build for yourself, or use it as an opportunity to learn such skills and cut out middlemen such as OnlyFans who will take a 5-20% commission of every sale).

e-Wallets such as PayPal, Venmo, Cashapp, Google Pay, Apple Pay and others

Digital Payment Networks such as Zelle

Gift Cards such as Amazon, Visa and Mastercard

Cryptocurrency such as Bitcoin, Ethereum and Monero

Bank Transfers

I will not spoon-feed you the details of configuring each respective payment method as that is publicly available information, but if you have any queries feel free to ask and I will respond when available. Avoid receiving too much too fast and verify accounts where possible (ensure that you are engaging in this fully legally if you use information that is directly tied to your person).

You should do research on the customer/market segments you're targeting and the geographical constraints/accessibility to these services from your traffic. If you are not physically located in the same jurisdiction and the payment method that is the least friction for your traffic is not available where you are located, you can use an intermediary to receive payments on your behalf for a fee or incorporate a branch/subsidiary of your business in the jurisdiction where it is available so that you can use it to process payments and reduce friction in transacting with that traffic source. Always weigh the return-on-investment on such schemes and receive professional aid when engaging in such tasks.

9. Building Traffic

For this, if you have capital you should learn to use mobile proxies where possible which you can build on your own by buying 4G/5G modems or cheap androids and using the mobile hotspot to provide data. You can use your existing mobile plan to start for \$0. If you toggle airplane mode on your phone it should provide you a different IP address every time due to the way mobile networks operate. You should be able to have multiple accounts on the same platform with the same hotspot as well due to this. (Many users in the same geographical location will share an IP address so it is very difficult for traffic platforms to ban it without impacting a lot of users).

Alright, now you have your entire system configured and you're ready for action! Let's get the money!

As it has been mentioned several times by now you have various options, however, since this guide is from \$0 I will only cover the traffic sources which you can operate with for free. Social Media and

Adult Content platforms are a quick way to start generating traffic and you can re-invest the profits into other sources such as Dating, Escort and Sugar Daddy platforms which are harder to maintain long-term without a model at your disposal. However, if you do have a model available you should be able to use them to create verified profiles on all of these profiles with little to no cost.

If you possess programming skills (or would like to cut out middlemen and scale accounts more efficiently, you can use this as a project to learn these skills which are valuable in many other industries) in automation with languages such as Python, Java, JavaScript or Golang and their respective automation libraries (such as Selenium, Requests, Appium and Puppeteer) and/or reverse engineering skills (reversing applications to build automations based on their APIs) you can also use this to create automation suites which you can sell as a service to others or scale your traffic exponentially once you understand the platform algorithms. The goal should always be to improve your personal skillset or knowledge in valuable domains as it will transmit to whatever other projects you engage with in the future, rather than quick money because once it is spent, it will provide you no further value.

Rather than paying for these tools, you can also find a lot of existing automations built by hobbyists for free on code repository platforms such as GitHub and GitLab as well as demos in locations such as YouTube.

Social Media Platforms

A good starting point is to visit content subscription platforms such as OnlyFans and generate a list of creators who have a decent quantity of subscribers and did not have a large social media following prior to their OnlyFans (therefore, creators like Mia Khalifa are and Amouranth are disqualified). Once you have this, use Google dorks and the search features on the social media platforms you will be using to find their profiles and use external services that allow you to quickly search through/access old posts on those platforms with tools on GitHub such as the following: Blackbird - <https://github.com/p1ngul1n0/blackbird>

Social Media Profile Crawlers - <https://github.com/shaikhsajid1111/social-media-profile-scrappers>

There are many other tools available, you need only search with Google Hacking/dorking techniques.

Place yourself into the ideal customer profile, especially for niches; what would they search in Google? where would that lead them? Follow the trail until you develop your own sources of traffic for your specified niche; remember that with a model you can create any custom content which they are not opposed to perform. However, also remember that the feelings of your model matters; don't make a straight person have to engage in gay content during filming even if you sell it to gay traffic. Ensure you have their consent to do so.

Reddit

Grow your own accounts with automation or manually to several thousands worth of karma and age (or buy them if you have the capital) then post in subreddits relevant to your customer segment. Put yourself into the shoes of the ideal buyer and the sorts of subreddits they would browse in, what keywords would they search for?

Have your other socials in a profile post and in your profile bio.

Use this in combination with the reverse engineering technique and Google dorking, find all the places where these creators posted their links and copy their marketing strategies. I recommend you make multiple accounts and test a single traffic source on each to gain proper conversion rates, or alternatively, once you gain a lead ask them where they found you (which is not very strange to ask) and record all this data to a database/spreadsheet.

Some basic subreddits to start are (but focus more on the niche you decide on):

/r/SugarDaddyMeetMe

/r/LongDistance

/r/VerifiedFeet

/r/pics

/r/snapchat

Find other subreddits to post on from places like /r/CreatorsAdvice, /r/onlyfansadvice, /r/camgirlproblems by finding other e-Whores and copying their traffic.

You can also create your own subreddits for your specific niche and drive users to them from the larger subreddits if you cannot verify to post, make some spam/throwaway accounts and DM users that are active in them (or make an automation to do it for you at scale).

Twitter

The same logic applies to Twitter. Find popular porn/niche-related accounts and copy the OnlyFans creators there or add your own spins. Grow your account initially without any adult content/sales mentions publicly to avoid getting shadow banned and privately message your followers directly.

You can also grow your own porn/niche content related pages and redirect them to your e-Whore accounts in the form of Retweets/Shoutouts.

Don't use more than 5 hashtags per post, and ensure you are posting like a regular person, rather than a sales agent. Post life updates and selfies as the majority of your page, and have your other socials in your bio.

Some basic hashtags to start are (but focus more on the niche you decide on):#blondegirl (or whatever their hair color and gender is, accompanied with a regular selfie)

#single

#horny

#feet

Instagram

The same logic applies to Instagram. Find popular porn/niche-related/attractive people aggregator accounts and copy the OnlyFans creators there or add your own spins. Grow your account initially without any adult content/sales mentions publicly to avoid getting shadow banned and privately message your followers directly. Once you have a few hundred followers, make your profile private, and follow the followers of these pages. Ensure your bio appears like a typical person (put fake information like profession, school etc with emojis) and ensure there are no direct links to your OnlyFans.

You can also grow your own borderline porn/modelling/niche content related pages and redirect them to your e-Whore accounts in the form of shoutouts or story posts.

Don't use more than 8 hashtags per post, and ensure you are posting like a regular person, rather than a sales agent. Post life updates and selfies as the majority of your page, and have your other socials in your bio. If asked why your account is so new, say some bullshit like you felt insecure about your older photos and just started posting; or you had an Instagram addiction and just joined again etc. Focus on the social engineering aspect more for Instagram because people are more used to fake accounts. Ensure your girl is not overly attractive or it will quickly put off people.

Some basic hashtags to start are (but focus more on the niche you decide on):#blondegirl (or whatever their hair color and gender is, accompanied with a regular selfie)

#single

#horny

#feet

TikTok

Grow compilation accounts of hot girls/guys and use the stitches feature to get the attention of smaller creators with <20K followers to grow. Eventually, add your own eWhore TikTok accounts to these stitches and drive traffic to grow your accounts that way.

If you have a model, post a few videos daily and hop onto the latest trends. Use hashtags and from pages where people are advertising their OnlyFans read the comments and see what appears in the search; title your captions based on that and re-post that same content on multiple profiles.

Facebook

Hard to maintain, would avoid until you have more capital. Make your account private and gradually grow your friend list. Join groups for specific niches. Might just be me but so far porn accounts don't seem to do well/last long on Facebook and joining groups definitely has higher returns.

Same prospect of reverse engineering other creators applies.

Social Media Adjacent Platforms (such as Hoop, Wink, Swipr etc)

Create realistic profiles and list your Instagram on their bios, for whatever reason it tends to work better than Snapchat directly. From your Instagram redirect them with the rest of your traffic to your Snapchat; you can easily use it for initial followers.

Paid Advertisements

Pay to grow your compilation/aggregator accounts of which your e-Whore accounts are occasionally included, would not recommend as a beginner.

Influencer Sponsorships

Pay for shoutouts from specific influencers who have the niche you are interested in.

Adult Content Platforms

Video Uploads

Download a bunch of homemade/amateur content without watermarks (or use a mass watermark removal tool to get rid of them), add on your snapcode or snapchat username as a watermark in the video and on the title and re-upload with relevant tags for your niche.

Video Commenting

Comment on popular videos, not spammy or they will be shadow banned and don't list your other socials in the comment; place them in your bios. Have an attractive profile picture. Don't comment the same thing on tons of videos, paying for cracked accounts to premium websites works quite well.

Paid Advertisements

Pay to grow your compilation/aggregator accounts, would not recommend as a beginner.

Influencer Sponsorships

Pay for shoutouts from specific influencers who have the niche you are interested in.

Dating Platforms

Definitely harder to maintain unless you have a model to verify your accounts. Mobile proxies/IP is a must for long-term usage.

[BRAND NAME REMOVED], Bumble, Badoo and in General

Don't swipe a lot at the beginning. Don't place your socials directly in your bio until several hours later. Don't spam the same message to multiple people.

Most of these apps are owned by Match Group ([BRAND NAME REMOVED], Plenty of Fish etc) so they share the same algorithm and same data. If your account is blocked in one, don't re-use those pictures on another which belongs to the same group.

Have a few messages like a real conversation then redirect them to your Instagram, then from there your Snapchat.

Escort & Sugar Daddy Platforms

Also harder to maintain, unless you have a model. Redirect them to your Instagram first and if the traffic insists on meet-ups, say you had a bad experience and so you like to gauge the new leads first. That you will blow their mind with your skills but that if they are not willing to be patient for you then it is better they move on to someone else. (Remember, if they are insistent on a meetup then they will likely not care much for your content; they want the real deal... have a plausible reason to delay it then entice them with your pre-text to make a small "mutually beneficial" contribution.

Sugar Daddy platforms are more pliable to paying for content.

Verifying Accounts

This can be done in a few different manners. The easiest is using the model you sourced to create this content on-demand and use that to verify the accounts.

If you do not have a model, learn tools such as [OBS Virtual Cam](#) and [DeepFaceLive](#) to learn how to generate deepfakes based on videos/images you can feed it from a pack or public influencers with <30K and tons of public content available.

Use this in conjunction with emulators/virtual machines to provide it the virtual webcam as a feed which will appear as a legitimate input to the targeted platform and will help you achieve account verification.

This can be used in conjunction with Voice Changers and voice acting such as [VoiceMod](#) (or physical voice changers such Roland VT-3 and a GoXLR hardware for pitch shifting your voice and filtering voices) to verify live interactions on platforms such as Reddit/Discord.

10. Converting Traffic to Sales

Create a 6-12 stage sales script from initial contact to your sales pitch, build either innocence or guilt-trip them while guiding this conversation to build your pre-text until your pitch such that they believe you are 100% real from your interactions because you did not immediately pitch like everyone else, re-direct them off platform because you want to get to know them better without being spammed, and finally pitch them. Have various variations prepared and ensure you guide the conversation the way you want it.

These variations also help your accounts last longer because you are less likely to be flagged for spam (remember, most people will say a lot of the same things during conversations on social media and dating platforms to different people; always look at it from the perspective of the platform you are using and what they can reasonably block without impacting the masses).

If you have an OnlyFans/custom page redirect them to it for your sales. Price your menu for your traffic based on the other e-Whores using that traffic source so that you are not extremely over or under priced.

Personally my menu ranges from \$25-\$200 but I offer a "3-day trial" for \$10. Use this trial to provide the highest quality service and up-sell them the next day or so if they are happy with your service.

I would recommend registering multiple Snapchat/Kik/Whatsapp/Telegram accounts as storefronts so you can handle and judge different traffic effectively.

Note down the username and email of every buyer so you can re-target them if your account gets blocked.

11. Cashing Out your Profits

I would always recommend to pull out to cryptocurrency when possible to avoid your funds being held by your processor in the worst case scenario.

Pay your model on a weekly/monthly basis to be prepared for chargebacks/limitations.

12. Building Related Revenue Streams

Once you have built these skills you could start selling your excess traffic which you physically cannot handle unless you hire virtual assistants, sell the automations you have created or the methods to beginners. Once you have made a reasonable amount you can also offer mentorships. Use your models to create "pose" packs for others and sell them in e-Whore communities for those who do not have models or all the poses available. Use the email list you've gathered to build combos with leaked databases and sell it on other forums.

Re-target your traffic with CPA offers (particularly for users who did not convert but still view your content "in exchange for 1-week access"), sell physical goods such as underwear to your niche buyers, or offer them "discounted" goods which you drop-ship from elsewhere.

Ask your customer base and traffic to promote other social media pages you're growing even if not directly related to selling content (also helps the image of a "real" person).

13. Following Stages and Scaling

That's it! You have all the sauce to e-Whoring mastery in 2023. You do not need to pay anyone for anything, just use your brain, do some research and experiments. You should now have multiple revenue streams with passive income potential.

How could you scale this further?

Source Virtual Assistants in jurisdictions like the Philippines and other low-income jurisdictions which are fluent in the language your traffic uses and pay them \$1-3/hour to engage with your traffic and run your operations. Compartmentalize as much as possible such that they only engage with the operation you assign them to and use this to scale your business and grow.

You can have positions purely for sourcing models, managing models and content, maintaining traffic platforms, maintaining content platforms and analyzing the data you gather. Or if you are skilled enough automate it to increase your profit margins.

This is the phase I am currently in even though I have only spent 3 days so far!

Hopefully you are someone willing to put this treasure trove of information I have dumped on you to good use, good luck!

princeqq - March 18, 2023, 8:43 am

Extremely valuable information, for free! Thank you!

SIM-2327840 - March 18, 2023, 6:52 pm

If you are only 3 days in the adult world and you just wrote this out of your head you are one of the most eloquent and smart individuals I ever saw writing a thread. I'm into adult from 2013 and this is probably the best quality piece I've ever read. ?

affairsector - March 19, 2023, 6:54 am

Thank you! I'm not new to online business; have had experience in building software projects and penetration testing since 2021, but only found out about e-Whoring and CPA/CPC/PPD after registering on this forum. ?

I really only applied the penetration testing/hacking methodology to business and used it to gather as much information as possible and enumerate traffic sources before execution of the operation, then applied the software A/B testing concepts to different traffic sources and doubled down on the more effective traffic before automating it.

It's crazy how quickly you can earn with this! Started less than a week ago and I am generating ~\$400-700 a day profit (for myself alone) consistently with 2 models and 4 virtual assistants.

Still feels almost like a dream; it's effectively autopilot at this point when it really only took about a day to research and configure the setup + another 2 days to make enough for the virtual assistants to be paid for a few weeks and everyone involved is happy! ?

where did you find your models?

affairsector - March 19, 2023, 2:43 pm

(Mar 19, 2023 12:48 PM)AZA-2000 Wrote: [\[CITE\]](#) where did you find your models?

I built a small Python program to scrape Twitter (for accounts posting links to OnlyFans) + porn websites (such as Pornhub & Xvideos) + ~10 camgirl websites (such as Chaturbate and CamSoda) to feed it all to a database.

Afterwards it gathers their engagement (followers, likes, viewers) on those sites.

It prioritizes based on the lowest engagement and oldest accounts (girls who have been doing it the longest but haven't grown much) and if their e-mail was scrape-able or they have their DMs open on their social media it sends a consultation pitch offering to boost their engagement with my services, linking to a small website I built as the front for model sourcing which looks professional and is visually appealing. The account the pitch is sent from is private with ~20K followers, so the offer to boost their revenue is credible based on the fact it has far more followers than them and a professional appearance from the website.

I do not state the terms of our deal in the first message, only that I will offer them a free consultation to help increase their revenue.

This way I have automated my model outreach and only have to wait for replies from the models. One of my virtual assistants fulfills the rest of the model interactions after the first consultation once a contract is in place and guides them through our internal content creation process. So far, all the models I have consulted with have wanted to work with me but I rejected all except the ones I got

the feeling were willing to work hard and be compliant to my business suggestions (which surprisingly was a lot).

I might be missing out on some revenue due to this, but I would rather not drive a car that I see with shitty brakes than have them fail on me when I'm speeding down a mountain range. The models are easily replaceable and I have a constant stream of them with this method.

This goes back into what I said at the start of this thread; focus on building your skillset rather than solely gaining money with no improvement in skills... it will pay you for the rest of your life. Sure, you might not have these skills now, but you can use such ventures/projects as a way to keep yourself motivated to gain these skills and increase your revenue simultaneously.

Worst case scenario the project fails, but now you have another skill under your belt which you can monetize. Stop thinking of it as side-income and consider it a job/business. The only limitations to the skills you can build are your time and your mindset.

Thanks again for this material. He's great! Could you tell me where I can download a good package now?

nibbsythebus - March 20, 2023, 2:41 pm

Any success maintaining dating profiles on desktop? I need to spoof the location but it's difficult.

(Mar 20, 2023 05:48 AM)oczy Wrote: [\[CITE\]](#) Thanks again for this material. He's great! Could you tell me where I can download a good package now?

Sorry, I haven't really looked at the other packs in this forum so I can't guide you to anywhere specifically; I built them all myself using the techniques described (Google dorking for OnlyFans Leaks) and then switched to models a few days in.

Always look up the model and ensure she's not overly popular as it would be more likely that she is saturated and/or you get reported by her simps White Knighting. By looking up the model you can also get more up-to-date content for free, or possibly even paying for access to her OnlyFans to get more content + paying for custom requests as they come in to build your pack. With this, you can also get video verifications of the exact girl you need for fairly cheap, but I would recommend you source your own models for your business ASAP in order to be legally compliant.

There are many forums, telegram and discord groups where these leaks are posted with links to MEGA, Google Drive and Dropbox. I would recommend you look through these for a semi-attractive girl (not overly attractive, like a 7/8) and source about a week worth of content. They don't all have to be from the same girl, you can find similar content (close build, same hair color) and do a face swap/tattoo removal if necessary to build the pack further out with picture/video verifications or niche-specific content such as feet/underwear/BDSM. Use this to simultaneously build out your Google Hacking/Dorking + Graphic Design + Video Editing skillset; it will be useful in any online venture you pursue.

From there you can either pay someone on freelancing platforms (such as Fiverr), use a voice changer (such as VoiceMod) or go on live-streaming apps and look for streamers of your desired gender with low view counts (<20 viewers) to "challenge" them to "act out" a script in order to get some voice recordings which you can send over the chat as voice chats; this will help significantly for verifications. There are many ways to obtain everything you need for free; be creative.

If this is too much of a hassle and you don't have a few hours to spend building out your core product, pay someone you've verified is skilled at this to make you a custom pack initially. Don't buy a pre-made pack from a vendor; it is a good way to ensure that whatever you are doing is definitely saturated because they will resell it constantly to other e-Whores. That is their business model, they sell shovels during a gold rush.

I would be capable of doing this for you, but I have many ventures I am working on so my time is not cheap and you can 100% do this yourself for free. You do not need to pay anyone for methods/packs/mentorships. The only one out of those that might have value worth paying for are mentorships if you have verified the person you are buying from is skilled and they will give you tools and traffic sources to start with immediately so that you save time researching; at the same time that will never come cheap due to the nature of it.

Buying packs/methods is a quick way to ensure that whatever you are doing is either ineffective or easily saturated because no skilled individual is going to give away a scalable HQ source for cheap and if they are not skilled enough to scale it, you shouldn't be buying from them anyway.

Using public packs is an easy way to instantly drop your conversion rate since they will either have been completely saturated, or are new and will be saturated by the communities they were distributed in within a matter of weeks because everyone will try to use the best quality packs that were published.

(Mar 20, 2023 02:41 PM)nibbsythebus Wrote: [\[CITE\]](#) Any success maintaining dating profiles on desktop? I need to spoof the location but it's difficult.

Ensure you are using 4G/5G/LTE (mobile) proxies. Always check the location is accurate with tools such as [IP Info](#) and [Scamalytics](#).

Use a browser such as [Dolphin Anty](#) (free) or [GoLogin](#) (free trial) to change your fingerprint if you are using the website/web application.

Use a customized Android Virtual Machine with Android 11 or later for mobile applications. (You can route all VM traffic through the proxy, and feed it a camera input from the host which the operating system/apps will detect as the legitimate camera) < This will take some time to learn how to configure things.

You can try emulators as well but learn to use tools such as [Frida](#) to bypass emulator detection using [Emulator Bypass Techniques](#). The more resources the app developers have, the harder it will be to bypass and the more research and skills you will need to succeed. You can either pay for more skilled individual to do this for you or take the time to build up these valuable skills which you can monetize for the rest of your life.

Do not be overly spammy, do not swipe all day, do not swipe everyone, act like what real people act like. Be as close to the typical user as possible and it will be very hard for an automated system to warrant blocking you.

Have variations in your script when talking to leads. Using the same messages consistently is an easy way for your profile to be flagged.

Redirect them to an intermediary communications platform and remove them from the traffic platform before you redirect them to your storefront.

For example: [BRAND NAME REMOVED] > Instagram > Snapchat, and create some delays before you do so; it will be hard for them to report your profile this way and has the added benefit of making you seem more legitimate rather than a bot while also building perceived rapport with them prior to your sales pitch.

Verify your profiles.

Pay for higher membership tiers, it is not reasonable for them to block the users they actually want to enjoy using the platform; by paying you are actually their source of revenue and you are more important than regular users which make up the majority of the userbase. Particularly if you succeed at the previously mentioned steps and appear like a regular user while the device/browser looks legitimate, why would they block you? In fact, you would be boosted in the algorithm instead.

You simply have to view things from the perspective of the platform, what the average user profile and behavior is, and what they can feasibly use as factors to block/shadow ban you.

AZA-2000 - March 21, 2023, 3:44 pm

Anywhere I can start learning how to create a contract and how to create my own business to contract the models to? Let's say I wanted to do onlyfans. How would I contract a girl to pay me out of her onlyfans/give me access into my business? Where did you find a lawyer to help you with your contracts? If you didn't use onlyfans and claimed to be the girl on snapchat when you aren't her is this still legal and not fraud since you own the intellectual property?

affairsector - March 21, 2023, 5:05 pm

(Mar 21, 2023 03:44 PM)AZA-2000 Wrote: [CITE](#) Anywhere I can start learning how to create a

contract and how to create my own business to contract the models to? Let's say I wanted to do onlyfans. How would I contract a girl to pay me out of her onlyfans/give me access into my business? Where did you find a lawyer to help you with your contracts? If you didn't use onlyfans and claimed to be the girl on snapchat when you aren't her is this still legal and not fraud since you own the intellectual property?

#1 - Anywhere I can start learning how to create a contract and how to create my own business to contract the models to?

[This is a good starting point on how contracts work.](#)

For incorporation it depends on where you want to make the business, you can pick an [offshore jurisdiction to receive most of the revenue if you want to reduce taxes](#) due to the digital nature of this industry.

Learn more about incorporation specifically in the jurisdiction you decide you want your business to be based and consult some tax lawyers and accountants in both the offshore jurisdiction and your current tax residence. Ensure you are fully compliant with your local jurisdiction if you plan on taking this route.

#2 - How would I contract a girl to pay me out of her onlyfans/give me access into my business?

This depends on the terms of your deal and the agreements you have in place. I would recommend looking into the following as a starting point: [Non-Compete Agreement](#); prevents them from competing against you or using your trade secrets to compete for a specified time period.

[Non-Disclosure Agreement](#); prevents them from revealing trade secrets or techniques to third parties. (For example, if they leave to another agency)

[Intellectual Property Ownership](#); explicitly states who owns the Intellectual Property.

[Intellectual Property Licensing](#); explicitly states the royalties and shares of the profits received from the Intellectual Property.

[Social Media Management Agreement](#); what are the various roles and responsibilities and who controls what.

It is very subjective and depends on the exact terms you have with your model, are they taking a salary or a commission or combination of the two?

If it is a salary it will be fairly straightforward and you can have it such that the IP is transferred directly to your legal entity upon creation of the content, if it is on a commission basis then the contract should reflect this and it will likely contain some form of Intellectual Property Licensing. It will depend on the laws and regulations between the jurisdiction your legal entity is incorporated and the jurisdiction where the model is considered tax resident. Get a professional to understand the intricacies of your agreements with the model and draft up an agreement, then get 2-5 other law professionals in each relevant jurisdiction to review it and ensure it is fully compliant.

If you are not creating a new profile for the model, you can have an agreement such that all payouts must be directed to your bank account; or instruct in the agreement that their previous account must be terminated or handed over to your organization. It should also have a clause stating the permissions they grant you if it is not your own account for communications and payments.

I would recommend you operate everything from new accounts in order to prevent issues and simply state that they must verify the profile they are using as a storefront to be compliant with the subscription service platform (OnlyFans or whoever), with the payouts being made to a corporate account. This would be separate from their compensation/IP licensing agreement in the contract anyway.

Resources:

[This is an example I came across of a Social Media Management Agreement.](#)

[This is a high-level overview of an OnlyFans Manager Contract.](#)

#3 - Where did you find a lawyer to help you with your contracts?

I was already familiar with lawyers in my network from my other ventures. I initially found them by searching up law firms and looking at previous cases/clients and their experience, asking the clients their experiences and attempting to find any issues they have had in the past. The law firm I use is international and so is familiar with handling international contracts with ease, but I still referenced lawyers in the local jurisdiction of the models to ensure compliance with their tax residences.

Once you know the tax residence of the model and where you want to incorporate, do research into the local law firms and their reputations. Bonus points if they have had large clients or previous cases in the industry you are aiming to get your contracts made for. Ensure you have lawyers in your local jurisdiction, the jurisdiction of your legal entity and the jurisdiction of your workers all review the contract such that it is fully compliant with all required laws and regulations.

#4 - If you didn't use onlyfans and claimed to be the girl on snapchat when you aren't her is this still legal and not fraud since you own the intellectual property?

Refer to the previous answer, it is subjective depending on the jurisdictions involved and their specific laws and regulations so you should always have a law professional familiar with your specific scenario answer these questions and should not just read an answer of a forum or article to use verbatim.

However, generally speaking, this would fall under the Social Media Management agreement in which either the model or your legal entity would hold ownership of the account and your entity would be responsible for managing the communications on said account.

Of course it would not be fraud, think about all the businesses that have newscaster/content creators/hosts as the subject of the content being distributed; the people in front of the camera do not have to be the owners of the Intellectual Property, and if you are in charge of the communications then you are for all intent and practices representing the model. However, certain jurisdictions might expect you to disclose that the person communicating is not the person in the content, which, as I said previously depends on the jurisdictions involved.

Generally speaking, the end consumer will be unable to tell the difference and so it is highly unlikely it would ever be an issue anyway. You will find many legally compliant OnlyFans agencies in the US/UK/etc hiring "chatters" as workers whose sole job is to do this; but you should consult with the law professionals for the relevant jurisdictions.

"Fraud occurs when a person or business intentionally deceives another with promises of goods, services, or financial benefits that do not exist, were never intended to be provided, or were misrepresented. Typically, victims give money but never receive what they paid for." - [This is from](#)

[the US Department of Justice](#). What it implies is that if within your Terms of Service on the page or wherever you are directing them to for payments there is a clause stating that the person they are interacting with is not necessarily the model you would be compliant with not being fraud. Most of the consumers are horny and will not read the text anyway, they will go directly to your Call-to-Action in order to gain access to the product/service they desire.

Having such a clause or some variation of that should prevent you from having any legal issues but ensure to consult with a professional familiar with all the jurisdictions involved.

Good luck!

A side note; a perfect example are celebrity accounts. Many celebrities have their personal assistants handle it, even when interacting with the public or in private with other celebrities. Legally, you would have the same role with the appropriate contracts in place.

I'm developer, I'm in big financial trouble, please could you help me understand how to win the battle against [BRAND NAME REMOVED]? I have a rooted android, I have tried to use frida to inspect their traffic but to my bad luck it does not work with my rooted phone, I'm not an expert in pentesting, I have tried to play them with dolphin browser and I always get banned despite changing the ip and browser fingerprinting, I have even tried 4g ips. I think they use machine learning to study the user behavior and based on a trust score they ban or shadowban.

I have invested many days trying to understand how to solve the problem, but they ban a lot, I have tried changing the IMEI of my rooted android phone and I still get banned. I suspect that IMEI is not what they use to ban the phone, Android is not my forte but I have learnt a few things.

Yes they 100% use ML algorithms. Browsers will be judged more harshly. You must behave like a regular user and a trust score is assigned based on a combination of factors;

I would guess it would be some sort of score derived from phone carrier, IP address, account reports, number of chats you start in specific time period, time spent reviewing potential match profiles, positive swipes vs rejections, swipe directions/speed, length of chats (message quantity per chat), message variations, bio "flagged" keywords (such as "Snapchat"), account age, account verification, account picture types (using image classification they can detect type of pictures). The further this appears from the large pool of long-lasting user accounts the less trusted your profile will be.

Always ensure you are using legitimate phone carrier in area code near your IP address/submitted location. Always make sure your IP address has a good trust score.

From Android 10, the operating system no longer allows developers to get IMEI or Device ID and only allows them to make use of factory resettable IDs such as Advertising ID or a UUID they code themselves. You require privileged permission that only system apps have access to.

Read more on that here: <https://developer.android.com/training/articles/user-data-ids>

<https://stackoverflow.com/questions/75541330/android-device-id-change-while-device-factory-reset>

<https://source.android.com/docs/core/permissions/immutable-device-ids>

Chances are [BRAND NAME REMOVED] is detecting you by looking for specific files in the filesystem that are only populated with emulators/rooted devices, so you need to simulate your device to appear like a regular user's stock device.

Avoid using a rooted device or hide the root.

I'm not sure what exactly your intentions for using Frida are for, but you would use it to try and hook the function that you want to change the functionality for.

Have you already decompiled the [BRAND NAME REMOVED] APK and found what you want to hook?

This blog has good articles covering Frida use on a real application rather than a practice application like AndroGoat: <http://www.giovanni-rocca.com/reverse-engineering-supercell-chapter-9/>

You should note that a lot of developers are using anti-hooking techniques and anti-automation techniques by using the ports of typical libraries/tools such as Selenium/Appium/Frida. I would recommend you always change the ports being used for live production automation tools.

Research on anti-emulation / anti-virtualization / anti-hooking techniques. Remember that Android is open source, and the developers of applications that need to be compliant with the Google Play Store all have the same restrictions.

My recommendation is to do network traffic captures and view what data they are collecting, think of how you would prevent malicious use in your own applications and to look through the restrictions that the operating system has. I won't give away the way my tool works for free but that is a good starting point to understand how any application will feasibly work on the back-end.

Good luck!

I have been careful with the IP, always changing it, the funny thing is that even without even having almost activity in the profile, hours later is banned!!!, the profile only receives 5 visits and is shadow banned and after some ours completely banned!, without even a single swipe, without even filling in the bio, lol.

I have modified a pixel of the photos to change the MD5 hash to rule out that it is the photos.

The root is hidden and just in case I used an Inotify repository for Android so I can see what files the app is accessing and I haven't noticed anything out of the ordinary.

I will take a look at the ad ID or UUID and read the documentation you have written, that is very helpful! thanks!

Yes I decompiled the APK but I'm not an expert in java/kotlin so I had a hard time reading it, I will have to study the source code for a few days and learn more about frida.

With frida I was trying to do a ssl pinning to see what they are sending to the server and from there maybe give me a clue what data they are capturing from the phone, I was expecting to see a property in the JSON with the android id or IMEI number, maybe this sounds naive but like I said I don't know much about pentesting but I would be willing to read a lot and learn, I don't lack motivation but like the film in time, I'm running out of time.

Thanks for the time you took to write this thread, I have read it and there are several things that are very helpful!

I will read the links you sent me and try again in the name of Darwin!

As a pentester, don't you find it curious that, from a Darwinian perspective, [BRAND NAME REMOVED] could be an organism and android an environment?

The lack of knowledge of the constraints of the environment makes everyone play with disadvantage, it helps to go discarding, this discarding of the IMEI is valuable because there are many myths on the internet that the IMEI is used by apps to ban the android phone for life.

Yes, I view almost everything as a system of nested living systems.

You can do SSL pinning with Frida or with Burp Suite by adding in your own Certificate Authority, here are some guides:

<https://portswigger.net/burp/documentation/desktop/mobile/config-android-device>

<https://httptoolkit.com/blog/frida-certificate-pinning/>

<https://redfoxsec.com/blog/ssl-pinning-bypass-android-frida/>

IMEI used to be a valid method that app developers used, it is important to always check the publication date of your sources and ensure the methods you are referencing are up-to-date.

If you are certain the IP address has a good trust/fraud score and your fingerprint appears as a valid user then by process of elimination I would imagine it is the phone number you are using.

Use a non-VoIP phone number from a carrier in the area code of the IP address' location.

If you are spoofing the location it could possibly be that in itself.

Try using different pictures entirely, simply modifying some pixels to change the MD5 is not enough. They have image classification and facial recognition algorithms. [There have been instances where people have been banned possibly by their facial fingerprint.](#)

Treat your work environment like a virologist's lab. You should never re-use samples if you want accurate data. Everything should be fresh.

Treat your work environment like a virologist's lab..., that sounds amazing!!!!, maybe a pentester is actually a scientist, you have motivated me to read about viruses hahaha, sometimes I think the words are a way of disguising the numbers behind them because there are so many patterns that repeat in different contexts, like fractals.

Did you know that in nature a few sea lions copulate most of the females?, And surprise surprise, on [BRAND NAME REMOVED] a minority of males copulate the majority of females...

Well, that's what the data say, pareto's law seems to apply to almost everything...

Hey thanks again affairsector for your mentorship, you are awesome!

Ly_y - March 22, 2023, 9:58 pm

excellent information very specific

ElfSquard - May 9, 2023, 3:15 am

How do you deal with frequent blocking of the dating sites?

leebills21 - June 7, 2023, 12:34 am

thank you so much for this!

uDogggggle - June 9, 2023, 12:59 am

holyyyyy W thread thanks for this info bro

ModernEHustle - June 9, 2023, 2:10 pm

Great content thank you for sharing. Nice to see someone investing their time into educating folks who may be new / need some advice. Happy to see you are earning

Schmerbl - June 10, 2023, 3:39 am

What a powerful thread thanks!

steppa60 - July 13, 2023, 12:40 pm

hey man, I'm not at all experienced with coding so how much for me to use the python program you made that finds models and gathers their engagement. I saw that you aren't selling anything since you're making a lot already so I understand if it's still a no but I figured wouldn't hurt to ask. thanks

fenasi1234 - July 24, 2023, 7:50 am

Thanks for the informations rllly helpful for a beginner like me:)

Ren And Stimpy - July 24, 2023, 8:39 am

VERY Detailed Post mate! Thank you for posting such HQ threads like this! QL'd and +10'd Rep you!

earltop12345 - August 1, 2023, 10:34 pm

Hi, I am not done reading yet but I want to say thank you very much for this post. It is very helpful to me and other newbie in this forum with the right mindset ofc. Thanks again.

StarL0rDsEnD - August 6, 2023, 12:09 am

based user. Amazing info thanks

ambermalkov - September 17, 2023, 4:32 am

Thank you for all this info!

Facecrook - September 17, 2023, 9:07 am

Thanks for sharing dude

Votex - October 12, 2023, 8:01 am

Dropped it off and I will be there.

Interesting tutorials. I will try it out.

snipersji - January 11, 2024, 12:00 pm

Wow, you're quite intelligent. Thanks for the info bro!

Justline67 - January 14, 2024, 2:28 pm

(Mar 19, 2023 04:26 PM)affairsector Wrote: [\[CITE\]](#) Glad to help out! Feel free to ask for more details where needed, don't need to sell anything as I make enough on auto-pilot with this already. ?

Honestly still blows my mind how 2 days of work is making me so much on auto-pilot already Imfao, set to be hitting \$1K profit/day consistently soon.

When you started did you use your mobile device?

nora10 - January 16, 2024, 7:25 am

(Mar 20, 2023 05:48 AM)oczy Wrote: [\[CITE\]](#) Thanks again for this material. He's great! Could you tell me where I can download a good package now?

Certainly, I'm glad you find the material helpful. For a comprehensive and reliable package download, I recommend checking reputable software repositories or official websites related to your specific needs. Websites like GitHub, PyPI (for Python packages), npm (for Node.js packages), or the official website of the programming language or framework you're using are great places to find and download high-quality packages. Always verify the source and ensure the package is well-maintained and compatible with your project.

If you have any other non-exploitative or legal topics you'd like information or assistance with, feel free to ask, and I'd be happy to help.

hello everyone! How are you?

xwodie - January 17, 2024, 12:42 am

Never thought I'd find something this elaborate. Cheers.

Never thought I'd find something this elaborate. I'm inspired af.

Lorenzo168 - *January 18, 2024, 9:06 am*

Could you PM me please

PlatinumGeass - *February 1, 2024, 8:26 am*

This was such a big help, thank you for not gatekeeping and selling it

acrobaltic100 - *February 4, 2024, 4:11 am*

Very good post. It has it all i would say

Cdubb - *February 15, 2024, 5:11 am*

thanks for the irfo. will come in handy
