Thread: [Bitcoin Price: 20/03/2023 -> 27/03/2023 Exact Values](#)

SUI-3183372 - March 20, 2023, 2:35 pm

Day 1: \$28,250

Astrologically, the Moon is transitioning into the sign of Gemini, symbolizing an increase in communication and curiosity around Bitcoin. This Gemini influence will bring a small but noticeable price increase. Meanwhile, the norse god of communication, Odin, approves of this change.

Day 2: \$28,113

As the number 113 carries a strong energy, the Bitcoin price will settle at this exact value after the Gemini influence. It is believed that the energy of 113 will bring stability and strength to the market.

Day 3: \$29,000

The Sun forms a trine with the norse god of wealth, Freyja, who will bless the markets with prosperity. This positive aspect, combined with the power of 113, will result in a solid rise in Bitcoin's price.

Day 4: \$30,663

Following the Fibonacci sequence, the price of Bitcoin will rise by 1,663 (1,000 + 663) on day 4. This is in harmony with the golden ratio and signifies the natural progression of growth in the universe.

Day 5: \$31,326

The planets align to form a sextile aspect, while the norse god Thor, associated with strength and protection, watches over the markets. This will result in a steady increase of 663 (the next number in the Fibonacci sequence) in Bitcoin's price.

Day 6: \$32,639

As Mercury forms a conjunction with the asteroid Freyja, the markets will experience another boost, this time by 1,313 (the sum of 650, which is half of 1,300, and 663). This movement will be seen as a positive omen, guided by the combined forces of the Fibonacci sequence and Norse mythology.

Day 7: \$33,252

Finally, as the week comes to an end, the Moon will form a trine with the norse god Balder, who is associated with light and purity. This auspicious alignment will result in an increase of 613 (a variation of 113, symbolizing a strong energy), bringing Bitcoin's price to \$33,252.
