Thread: [TRADING ALGORITHM ON TRADINGVIEW | PROFESSIONAL ALGO | POTENTIAL 5 FIGURES A WEEK](#)

KyO - March 20, 2023, 2:40 pm

Okay i'm going to keep this short , i don't need any fancy thread or anything like that , a lot of people here know me and know how legit i am when it comes to business. I'm selling an algorithm that i put together myself for crypto assets of high volatility , works really well with FTM, PEOPLE, ALICE etc... this is for trading futures, the algorithm follows NAFX style , i'm giving out 2 copies to REPUTABLE members of my choice. This algorithm is a combination of indicators that i tweaked and put together myself, it's easy to follow, it tells you when to go long and when to go short, and it's made to be used on the DAILY time-frame which it has more accuracy, some experience in trading is preferred , it makes your day-trading easier , but if you know anything about trading nothing is guaranteed, i have been making money with this algo and i'm only selling 10 copies as of now. there is no refund after purchase.

Price is \$500 ?

Let me give this algo a go, vouch copy please. ?

KyO - March 20, 2023, 4:23 pm

1 vouch copy has been given, just one more left

Tando - March 20, 2023, 4:49 pm

I took a look at the algo and here are my thoughts:

The algo consists of very key indicators that account for trading entries, confirmations, continuations and exits. For any trader that is looking to take the complexity out of their day trading then I highly recommend that you check this out. The risk management element to this algo and smart entries/exits would make it very profitable. Often when trading it can be stressful to think of many different things, but with this algo it puts it all right in front of you, all done for you - so you can expect to have a solid entry and exit.

The continuation/confirmation element is also powerful, it takes away a lot of noisy signals and only goes after the high R:R - which is the cornerstone of profitable trading. It makes trading easier.

I've seen many algos before in my 6 years of trading, and this one is really up there.

Highly recommend giving it a run.

No i do not, i can offer a discounted first copy and that's it. Then i will probably raise the price up , i have someone using it right now and he is going to post a vouch soon i believe

Fresco - May 4, 2023, 11:27 am

Can you post screenshots of the algo being executed on TV, please?

Thanks

Thanks

The algo isn't scripted to one indicator, its a combo of multiple ones , after certain conditions are met , your entry indicator will tell you if you should go into the trade or not. Are you familiar with NAFX style trading ?

Got it.

Honestly, don't. Im not aware of NAFX style, but I will search for it.

I have a good experience in trading and pinescript...Got some few questions...

1. Is this strategy or indicator
2. Which TF does it gives good result
3. How many entry conditions does this script have.
4. what was the max winrate with tp and sl %
- 5, Does it have alert conditions with TP and SL value? (to use in bot trading)
6. \$500 per month?

Thanks in advance...

6. \$500 per month?

Thanks in advance...

1. It's a strategy

2. I use it for daily time-frame only

3. There is 1 entry indicator , but there is a base indicator where it tells you whether you should take a short or long, confirmation and a continuation indicator.

4. I don't have winrate counted , but i can show you past years trades and you will see that the winrate and RR, and see how good it is , even with a 2:2 RR, it doesnt take many trades, sometimes just once a month but it gives you REALLY good entries, almost tops and bottoms.

5. No it does not, the trades have to be taken manually after daily candle-close only.

6. \$500 one-time fee :)

You're welcome !
