Thread: [\[Social Engineering\] Easily Find Unknown Numbers Identities](#)

Jose - March 21, 2023, 5:52 am

Sometimes, I get random phone calls from unknown numbers (Not No-caller IDs).
Below is an easy method on finding the identities of these unknown people.

To begin, you'll need: A Snapchat account
A phone (iPhone or Android, it doesn't matter)

Tutorial:

1. To start, you've been called by a random +1 number.
2. Go to your phone > Contacts > Add new contact.
3. Add the phone number to your contacts and set it to a random name.
4. Open snapchat and go to "Add Friends".
5. Snapchat should automatically sync your contacts into snapchat.
6. Go to "All Contacts" and scroll down until you see that new contact you added, along with their username, name (if there).

If they don't appear and instead are located in the "Invite to Snapchat" section, then this method doesn't work. :(

Enjoy

This usually works, I sometimes do it with different apps like cash app or facebook to make sure

i'd say you could also search in other social networks as well. I think you can look people up by their number too with facebook and insta
