Thread: [BTC local top/bottom](#)

javierpena - March 30, 2023, 11:18 am

I am starting this thread and I will try to predict the local top and bottom of BTC each hour in the next 2-3 hours

bottom now: 27650-27500
top in 1 hour: 27900-28100

see you in 1 hour

Edit: I mistakenly wrote 27500 instead of 27750, basically 100 range between 27650-27750
current BTC price: 27932

Alright, so at least I got the direction correct and also barely fit into my price range but still not bad.

now: 27932
I still believe that we will not go above 28200 in the next hour so:
local top: 27900-28200
I think we are going down from here so:
local bottom: 27200-27100

welp, that didn't go so good, at least I got the top right ? I am still bearish for the next hour and I firmly believe we will see 27200

By the looks of it we could be going for a trend reversal but I still think downward motion is still more likely. Anyway the future is clouded with mystery my advice is exit all profitable positions and hope for the best on the ones which are in the red. Good night everyone ?
