Thread: [HELP - ETH transaction stuck while sending from Mycelium](#)

SEOhunter888 - April 3, 2023, 10:12 am

Transaction is pending since 4 hours already, 20 gwei gas price. It doesn't look like it is going to move on.

Is there any way to get transaction unstuck?

0x22e79302c089e2b01e38cf4f11f6c1fbfe9e66eb010f609b50aaf22fd456d497

Transaction hash above.

shreder - April 3, 2023, 12:13 pm

Looks like you got caught in the ETH PUMP.

Anyways you can speed it up by adding higher gwei, I assume your wallet has such a feature.

In the future you can consider using ETH L2, I am doing tx liquid fast for pennies.

There is no such option in Mycelium wallet. What to do?

Just wait, usually early hours gmt the gas gwei drops below 20. It will likely clear overnight.

I hope so but what if not, what should I do then?

Looks like it cleared, it would have cleared by now since gwei is 17.

You should try Lightning network, instant & zero-fee payments.

Or Zelle.. which is instant and free. Both are of equal decentralization.

ETH is run by 3509 pruned nodes, 1783 of them run on amazon web servers so idk how you even mention the word decentralization here.

Vitalik misled people by renaming pruned nodes to full nodes. The real full nodes are the archive nodes and they run basically the whole network. The pruned aka full nodes are forced to get blocks' data from the archive nodes, they basically have to trust them.

The pruned nodes aka full nodes store only 128 blocks worth of data.

What is very interesting is that you cannot find the number of archive nodes, anywhere. I doubt that there are more than 100 archive nodes worldwide. These nodes will defend ETH hard fork if something happens to the 129th block and backwards.

ETH is so centralized that is required 1.5k\$ setup to run and full node + 200\$ per year for new storage since 3TB are added to the blockchain size every year.

All the archive nodes are run by Vitalik and his friends (companies who are on the top of the list of this pyramid). Nowadays, Vitalik and his boyfriends are mentioning everywhere that ETH has 500,000 validators so people think that it's decentralized. He didn't mention though that a 8-core pc with 32 GB ram can run 1000 of these validators and they are only passive listeners, they are useless and clueless about what's happening to the blockchain.

Opt out, understand and study Bitcoin.

SEOHunter888 - April 5, 2023, 5:35 am

Issue has been fixed now. Thanks for all your feedback. BTW, nice discussion started to grow here. THX

Nice, if you need any help for LN or BTC or any other explanation let us know, I'd be happy to help you out. Nice discussion started but seems that facts brought the silence in the room for these ETH maxis :(
