Thread: [Minor Bug on Blog Feed & Question about blogs](#)

source - April 9, 2023, 10:07 am

I noticed while scrolling through the blog feed that on previews it does not register the mycode,

Here is an example of the preview:

When clicked to view entire article:

Regarding my question about blog posts, do they show on peoples profiles? ie; if I visit <https://hackforums.net/member.php?action=profile&uid=5064970> , I do not see the blog posts anywhere on his/her profile. Is there a tab somewhere im missing?

Blogs show on the profile. It's easier to find when it's filtered.

And as for the MyCode not parsing "properly" - it's intentional as far as I know. When we used Blogs for HF News, MyCode wouldn't parse except for the initial `img` tag in the preview section. Only when you open the blog(s), will it parse MyCode. Likely to avoid a ton of images filling up the blog page.

I was curious if there was a rhyme or reason for the parsing behavior, wanted to clarify it.

Alternatively, you can find the blogs for a specific user via their UID, and replacing it in the following link:

Code <https://hackforums.net/blog.php?action=usersearch&uid=UID>

Anyways, Blogs still needs a full revamp, but there's no current dev afaik, you can throw in more feedback in there too if you want: <https://hackforums.net/showthread.php?tid=6139026>
